Hey 🙌 I'm **Shrihari Sankaran**, a product designer + frontend developer based in London, UK.

I got into tech & design when I was 15, building websites on Geocities over dial-up internet. These days, I spend most of my time designing simple & usable experiences for digital products. I design in Figma and build in HTML, CSS and Javascript.

I'm a generalist designer working all the way from user research to UI design and even stretching into frontend development. While I've worked primarily in "product design" roles, I identify as a "maker". As long as I can remember I've been making stuff. I have a deep understanding of HTML, CSS and Javascript and enjoy writing code as much as designing things.

When not working, I enjoy writing, playing the guitar, learning French and going on hikes.

BridgeU

July 2018 - Present

About BridgeU

BridgeU is an ed-tech platform that connects high school students with universities that are the best-fit for them.

BridgeU helps students with a suite of tools designed to help them understand their skills and strengths, explore, research and apply to international universities.

It also helps college counsellors and teachers facilitate a careers guidance program for their students and help track the university application process in a single place.

Background

I joined BridgeU in 2018 as the sole designer replacing the departing designer at that time. Throughout my tenure, the company has experienced substantial growth, expanding from 30 to 120+ members, and undergone a transformative acquisition by Kaplan, resulting in a complete overhaul of the business model.

In my capacity as Senior Product Designer, I have undertaken a diverse range of responsibilities, touching nearly every facet of the product. From **minor iterative enhancements to comprehensive overhauls**, I have taken full ownership of the design process, from conducting user research and ideation to final design implementation and handoff.

As a pivotal member of the team, I have contributed significantly to the expansion of the design department, which has grown from 1 to a talented team of 7. My involvement extended beyond design duties, and I **actively participated in the recruitment process** alongside the head of design to bring in skilled individuals.

Background

Collaborating closely with developers, I spearheaded the establishment of the first-ever **component library and design system**, implemented in both Figma and code. As a result, more than 90% of the designs now rely on these components. Continuously advocating for design system initiatives, I have played a vital role in refining processes that have substantially improved the overall team performance.

Over the past year, I have taken on the role of **coaching and mentoring junior designers** within the team. By providing guidance and support, I have been instrumental in fostering their professional growth, helping them progress in their design careers and evolve into mid-level designers.

Case study

Student Onboarding

Background & Goals

At BridgeU, we use the **OKR framework** set goals and track outcomes. The objectives are set at the company-level. All teams and squads define their key results to align with the business objectives.

In 2023, the two company-level objectives were:

1. Materially improve the number of engaged students with our products & services throughout 2023.

2. Increase our value to university partners by influencing student decision-making in ways that can be evidenced and attributed to BridgeU.

My squad was focused on objective #1 and our key results were:

- Increase the percentage 2024 graduating students who have reached the data completion milestone for personalised content by 30th October.
- Increase the average number of unique platform sessions done by the 2024 graduating students from by 31 Dec 2023.
- 70% of the 2024 graduating students have at least 3+ shortlists by 31 Dec 2023.

Background & Goals

In the Product and Design teams, we ran an internal workshop to brainstorm areas of focus for the quarter. We involved various stakeholders from across the business, to help identify areas of focus. We used the feedback we've received in the past.

Based on the outcome of this workshop, we identified a few key areas of focus.

Our squad consisted of 1 product manager, 2 designers (me + a junior designer I was mentoring) and 6 engineers. I started with the Onboarding experience as this was top of the funnel.

<ul style="list-style-type: none">- Onboarding experience (in-app)- Onboarding comms (off-app)- Help students pick countries (off-app; in-app)- Help students pick subjects (off-app; in-app)- Re-engagement comms (off-app)	<ul style="list-style-type: none">- Increase % students at [milestone] within 1 day of registration - 48%- Reduce median time to [milestone] within 1 day of registration - 2m44s- Increase onboarding comms OR, CTR, conversion rate - 46%, ??, 17%- Increase % of 'gone dark' students we recover (to be refined) - ??
(n/a - monetisation focus)	(n/a - monetisation focus)
<ul style="list-style-type: none">- Simplify student journey/experience (in-app)- Improve uni/course recs (in-app)- Uni/course recommendation comms (off-app)- Improve search experience (in-app)- Improve depth of uni/course data (in-app)- Improve breadth of uni/course data (in-app)- Increase incentive / value of shortlist (in-app)- Shortlist-related comms (off-app)- Improve visibility of uni/course data (in-app)- Re-engagement comms (off-app)	<ul style="list-style-type: none">- Increase % students shown uni/course in 1 day of [milestone] - 81%- Reduce median time to see first uni/course in 1 day of [milestone] - 5m2s- Increase % students view uni/course profile in 14 days of [milestone] - 50%- Reduce time to uni/course profile view in 14 days of [milestone] - 28m45s- Increase % active students viewing uni/course profiles - 32%- Increase avg. uni/course profile views per active student - 4.8- Increase % students shortlisting uni/course in 14 days of [milestone] - 57%- Reduce time to first shortlist within 14 days of [milestone] - 24m11s- Increase % of students w/ 3+ shortlists within 14 days of [milestone] - 49%- Increase % of 'gone dark' students we recover (to be refined) - ??

Onboarding Goal

We want students to tell us what decisions they have or have not made, in order for us to understand their context. By understanding their context, we can deliver an experience that's relevant to them.

We know from the past data that students who enter their preferences on BridgeU are more likely to return to BridgeU for more sessions, and end up shortlisting universities on BridgeU.

This would **impact our key results directly**.

Existing Onboarding Experience

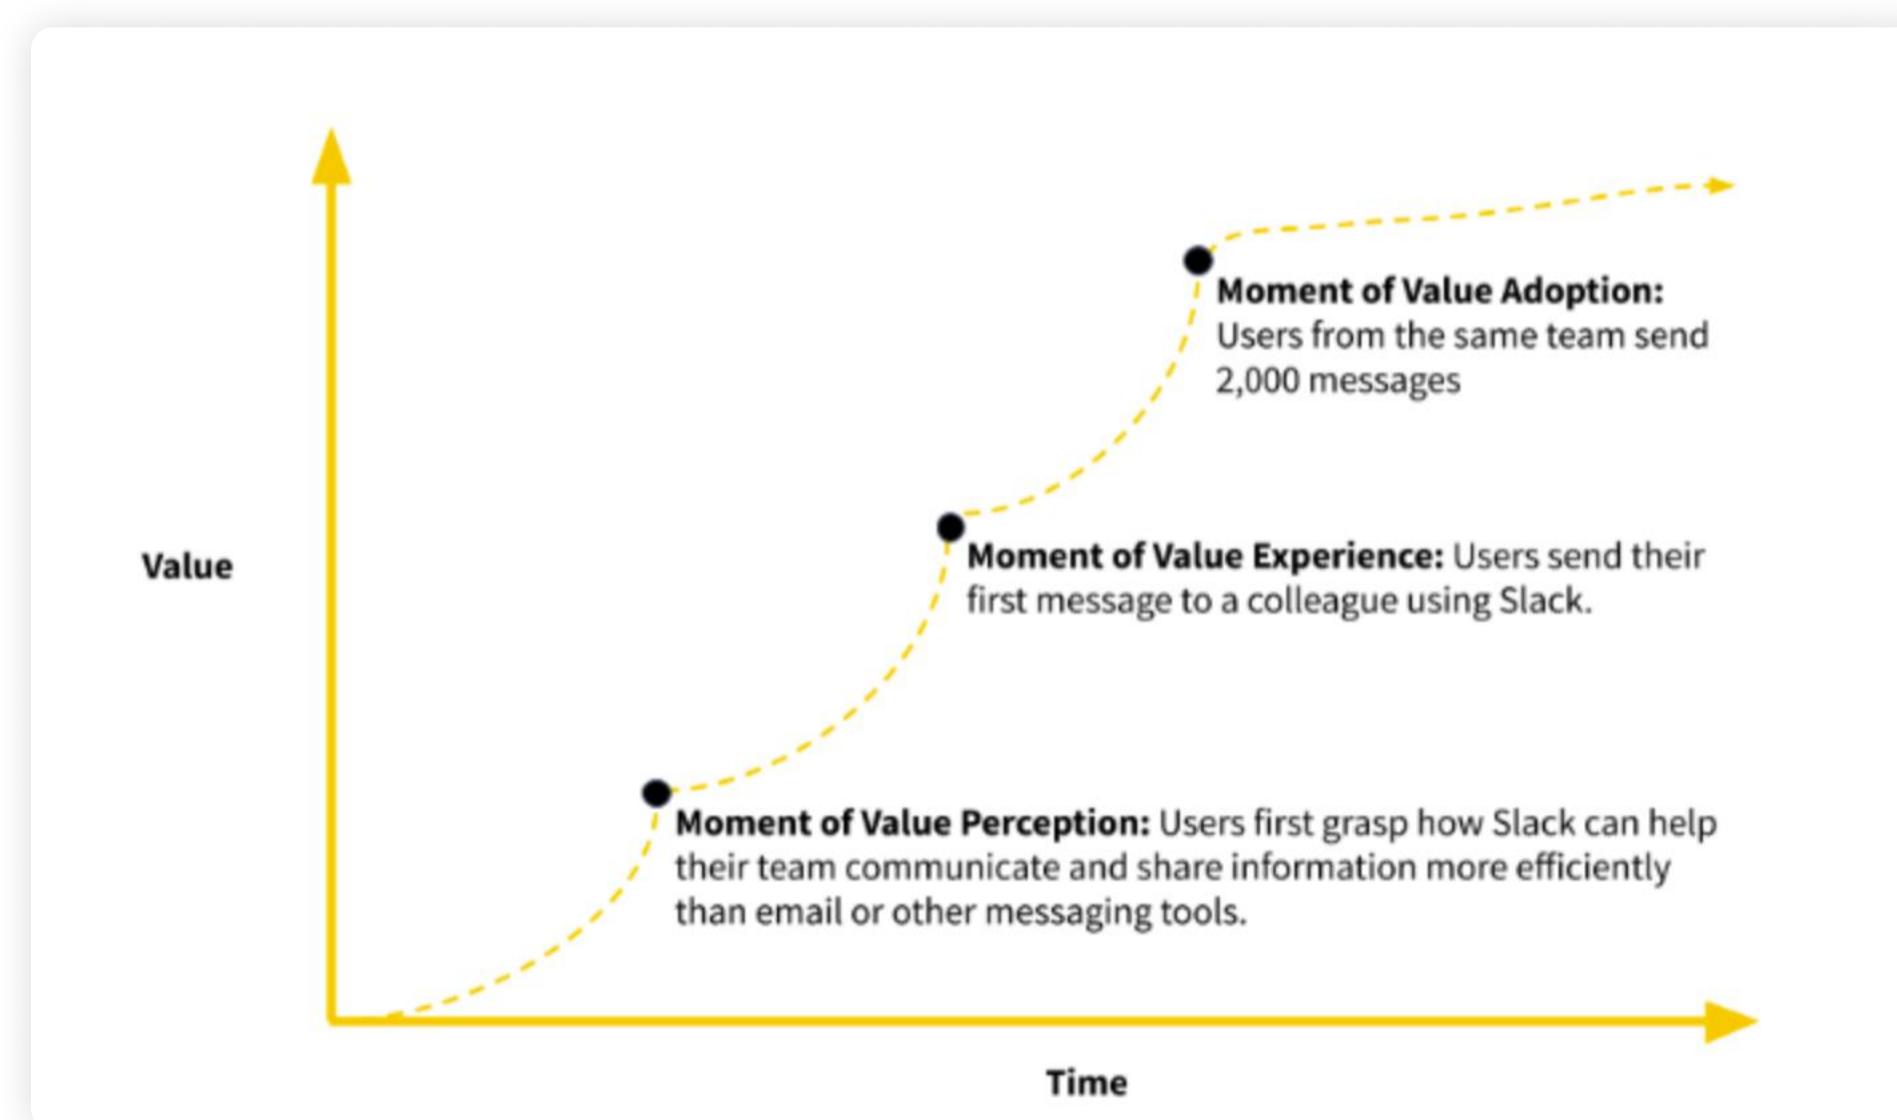

In the existing experience at the time, onboarding was practically non-existent. Students were prompted to set a password and landed directly on the homepage without any context or guidance.

The image displays three screenshots of the BridgeU platform's onboarding process:

- Email Invitation:** A screenshot of an email inbox showing an invitation from "BridgeU" to Shrihari. The subject line is "You're Invited: Join Your Classmates on BridgeU". The message body says, "You've been invited by your counsellor, Dumbledore to activate your BridgeU account." It includes fields for "Email" and "Password", and a checkbox for accepting terms and conditions. A green "Activate Account" button is at the bottom. A note at the bottom of the email states, "Please note that BridgeU is best experienced on laptop/desktop".
- Account Activation Page:** A screenshot of the BridgeU website showing the "Harry, Welcome to BridgeU" page. It asks the user to enter their email and password to activate their account. Below the form is a note: "If you have issues setting up your account, speak to our team at hi@bridge-u.com".
- Homepage:** A screenshot of the BridgeU homepage for user "Shrihari". The sidebar menu includes "Home", "University Visits", "Assessments", "Strategy Advisor", "Careers", "Profile builder", "Universities", "Shortlist", "Applications", "Writing Builder", "Recommendations", and "Test Management". The main content area shows "Shrihari, Your Top Stories" with a placeholder "Articles for you will show here." and a call-to-action "Go to the Profile Builder". The "Your Progress" section shows a progress bar from "Introduction" to "Shortlist", with steps 1 and 2 completed. The "Your Tasks" section shows a placeholder "Tasks assigned to you will show here." and a small icon of a person thinking.

The Onboarding Framework

We used this as the foundation for the onboarding experience we wanted to build. We wanted students to experience a series of **Aha moments** as they're onboarding to the product.

Identifying the “Aha” moments

I ran an internal workshop with stakeholders from across different teams, to brainstorm what the “Aha” moments would be for different personas of students.

Let's start here...

Agenda

- 5 mins - Intro
- 5 mins x 4 user types:

 - 5 mins - Write down Aha moments
 - 5 mins - Review & Discuss
 - 5 mins - Conclude & Next steps

Aha moments

Student user types

- Students who aren't sure how or where to start
- Students who have some idea, but are interested in exploring their options
- Students who have strong preferences, and want relevant options
- Students who already have some unis/courses in mind
- Students who are not ready to start considering their future/university plans (not the focus for this workshop)

Workshop

Students who aren't sure how or where to start

Moment of Value Adoption

Students who already have some unis/courses in mind

When and How Did You Start Searching for Colleges?

Identifying the “Aha” moments

Based on the workshop, we identified a few important “Aha moments” that we wanted to create through the Onboarding experience.

Moment of Value Perception

Users feel reassured that it's normal to feel this way and BridgeU will help them figure out how to get started

Users see a step by step plan of how BridgeU can help them from “where they are” to “where they want to be”

Aha, I recognise where I am within this journey

Moment of Value Experience

Students enter their preferences, and see next steps/suggestions based on that

Users receive a recommended plan / pathway / first step for how to get started

Users go through a first step in the plan and see how it has progressed them further

Moment of Value Adoption

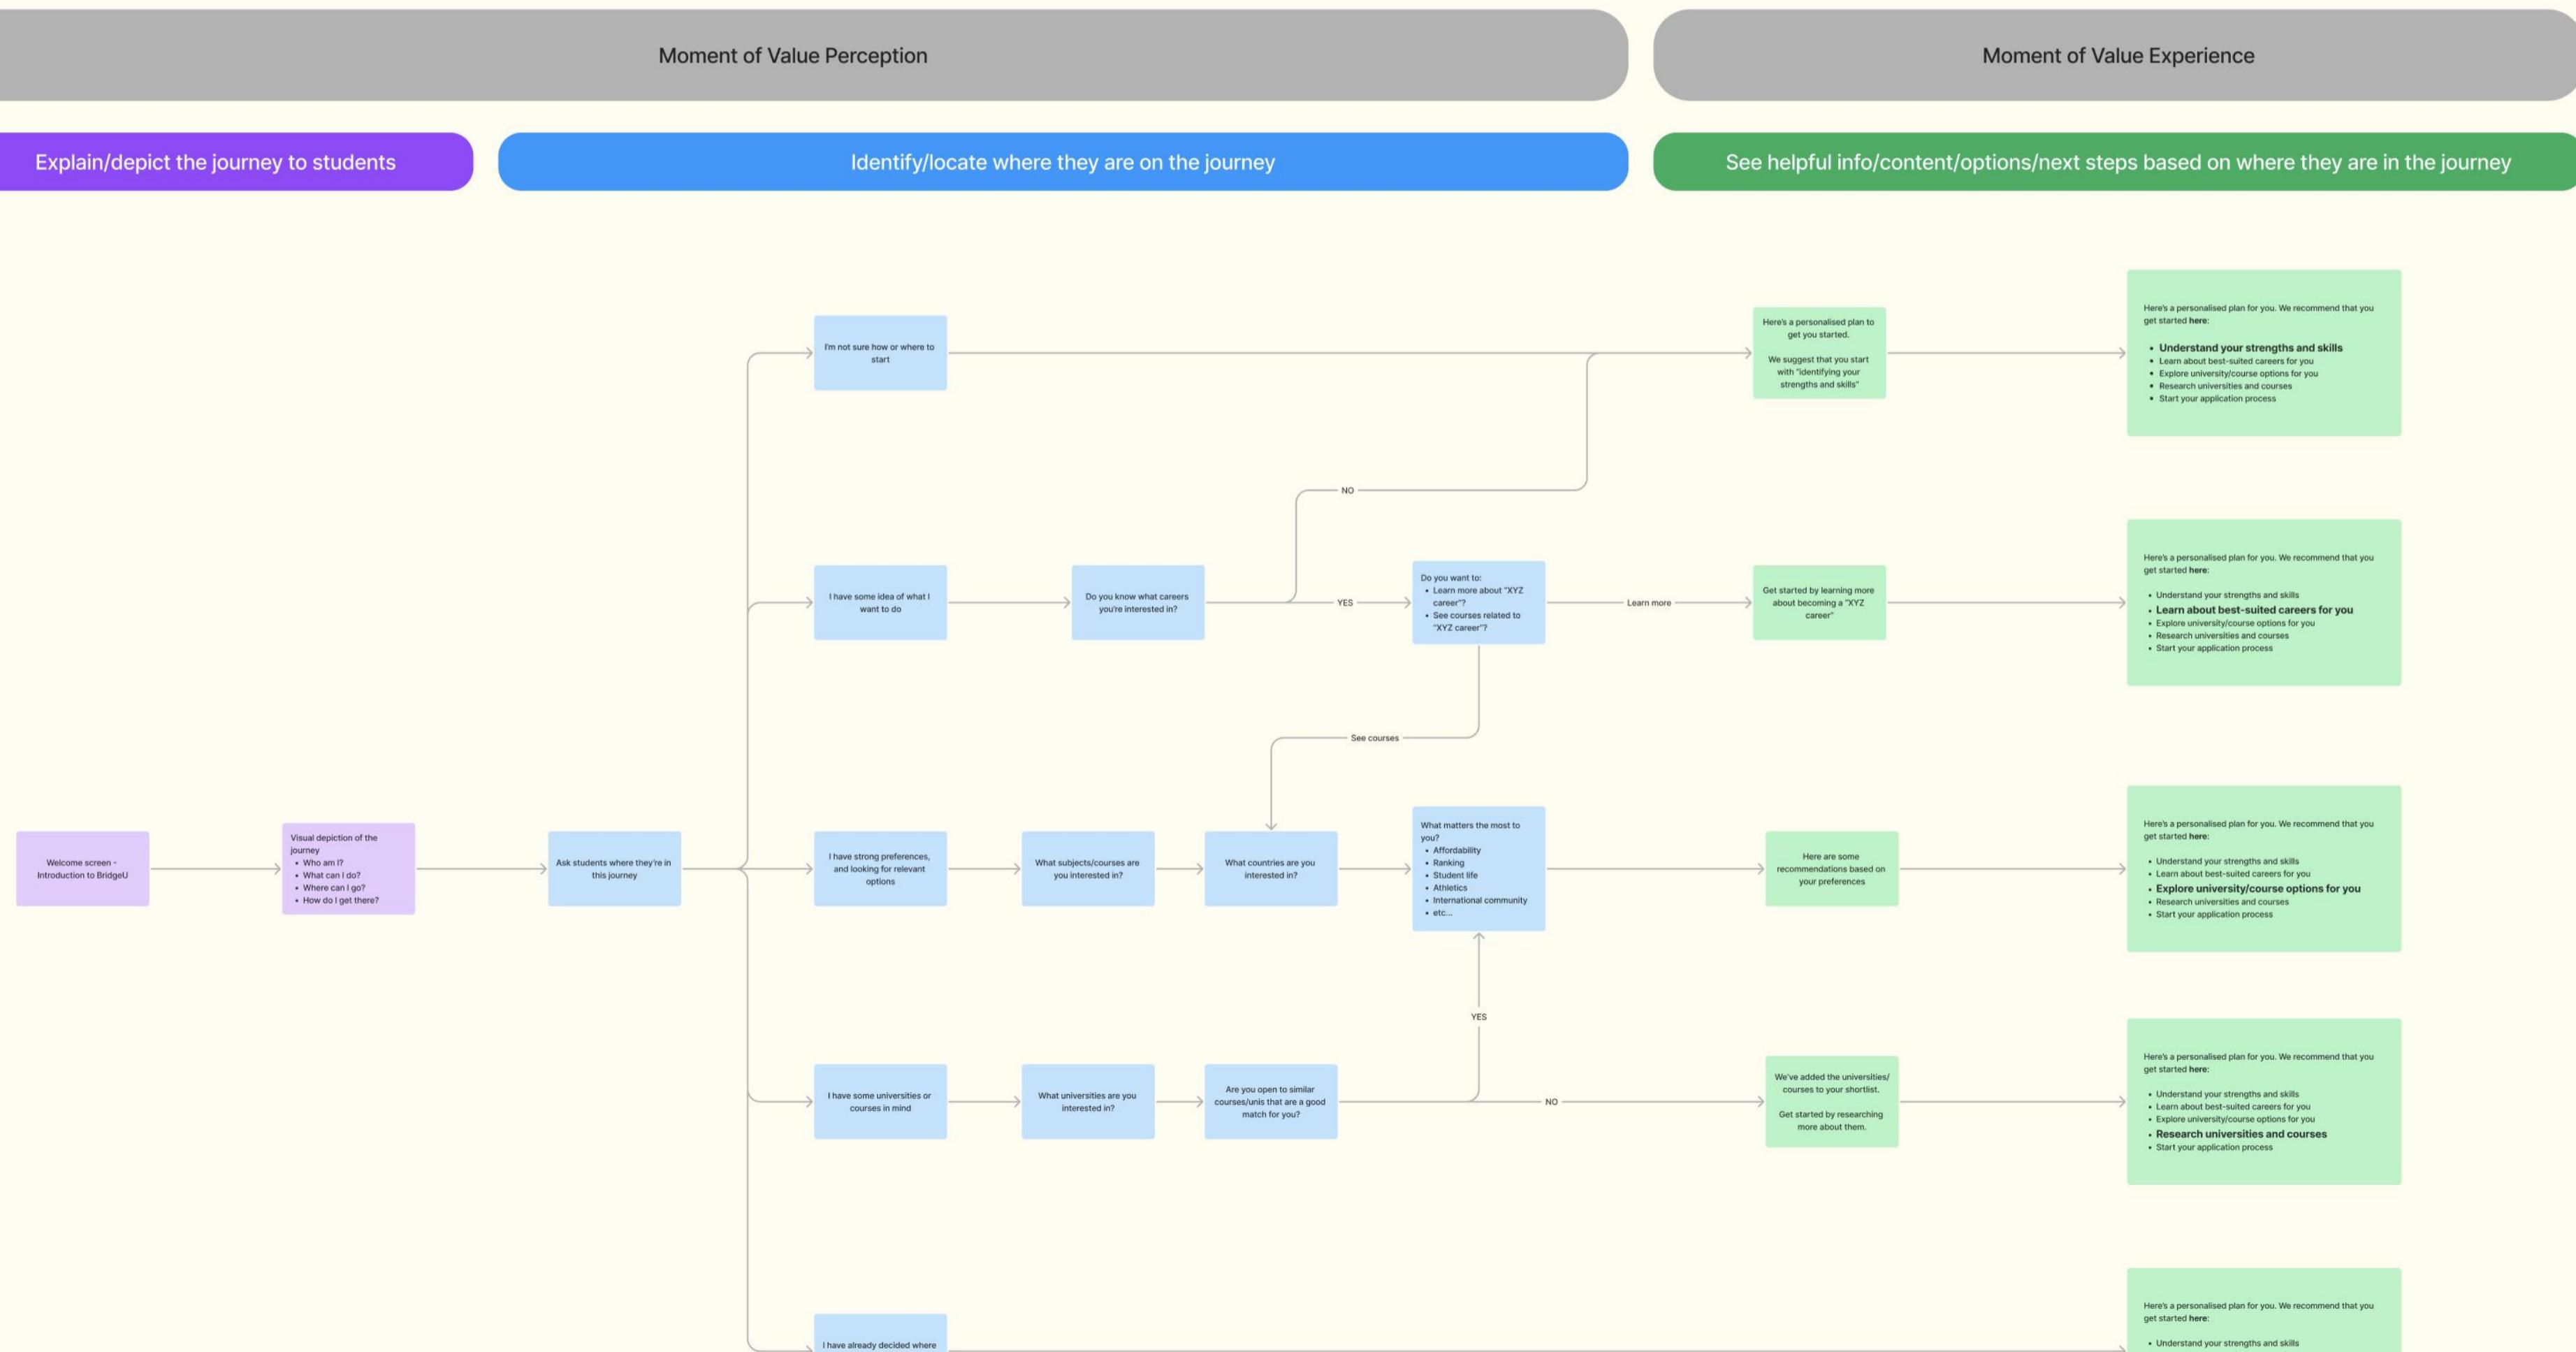

User has a shortlist of subjects and can start to search for uni's / courses.

Student receives a recommendation of the best options for them

Users continue going through the plan by BridgeU, to make continued progress

User flows

Equipped with this, I started creating some high-level flows in Figjam.

Ideation & Wireframing

Based on the user flows, I started creating some early concepts and wireframes in Miro

BridgeU helps you build a roadmap for your future!

Who am I?
Understand your interests, skills, and strengths.

What can I do?
Discover and research your options.

Where can I go?
Explore careers, record experiences, build your CV, and set goals.

How do I get there?
Ace your applications and enrol at a best-fit uni!

Your future is in your hands.
Scan to start your university journey!
or click here

Can you guess how many universities there are globally?
Less than 10,000
10,000 - 20,000
More than 20,000

There's a whole world of opportunity out there

But figuring out the best path for YOU can be really hard!

And there are some tricky questions along the way

What does success mean to me?
What inspires and motivates me?
How can I make a positive impact on the world?
Where do I see myself in 10 years?

Map - direction, destination, guidance

Reaching new heights - ups and downs along the way

Invest in your growth, plant seeds etc.

Unlock future opportunities / possibilities

Let's start with an easy question 😊
What is your name?
Enter your name...

Welcome, X! 🙌 Choose an avatar
Or upload your own photo

X, when will you graduate from your secondary / high school?
YYYY | MM

p.s. let us know your birthday, X
(so we can send you a special birthday message!) 🎁
YYYY | MM | DD

How would you like to start?
you can switch modes later

RECOMMENDED

- GUIDED MODE**
Discover what BridgeU can give you now and again.
- EXPLORE MODE**
BridgeU can help you explore options myself and ask the questions

Variation - G9, G10

How would you like to start?
you can switch modes later

RECOMMENDED

- GUIDED MODE**
Start with WHO? Find out what you care about and specialise. BridgeU designs a pathway for you based on your skills and interests.
- EXPLORE MODE**
Start with WHAT? Explore what you want to do and your options. BridgeU will help you work out what's best for you and your pathway to your goal.

Based on your answers, we think you should start here:

Who am I?
Understand your interests, skills, and strengths.

What can I do?
Discover and research your options.

Where can I go?
Explore careers, record experiences, build your CV, and set goals.

How do I get there?
Ace your applications and enrol at a best-fit uni!

Or you can choose a different option above to get started

Have you started thinking about university?
I'm just getting started
I know where I want to apply
I'm not sure if I want to go to university

How do you feel about applying to university?
Stressed Confused Overwhelmed
Excited Inspired Confident

What is the hardest thing about applying to university?
What excites you the most about applying to university?

Future Vision

As I progressed with the design iterations, it became clear that students fell into a linear spectrum based on what decisions they have made or not made. Some students had no idea where to start their thinking, some students had it all figured out. BridgeU wasn't serving the needs of this linear journey very well. **It was a one size fits all experience.**

This led me to question how the BridgeU experience could evolve in the future to accommodate this student journey, and what the onward experience would be after Onboarding.

I explored some high-level ideas on this line of thought, and then explored it further as its own side-project.

Future Vision

Prototype & Testing

I picked a few ideas and stitched them together as a prototype. The goal was to show this to students and test the overall approach, and understand what questions resonated best with students, which ones they find helpful.

At this stage, it wasn't a finalised design or flow that we were testing with students.

Learning Objectives

We set out some learning objectives for the user testing sessions

- How does the student describe the journey/process themselves?
- Does the way the journey is depicted resonate with students?
- Can students recognise where they are on that journey?
- Do students prefer to have a guided experience or a more self-directed journey?
- Are they perceiving the options/info/next steps we're suggesting to them as valuable?

The diagram illustrates the BridgeU roadmap, featuring a red robot icon with a yellow hand pointing right, followed by the text "BridgeU helps you build a roadmap for your future!". Below this, a horizontal line connects four circular icons: a green person icon (Who am I?), an orange briefcase icon (What can I do?), a blue globe icon (Where can I go?), and a purple graduation cap icon (How do I get there?).

Who am I?	What can I do?	Where can I go?	How do I get there?
Understand your interests, skills, and strengths.	Explore careers, record experiences, build your CV, and set goals.	Discover and research your uni and course options.	Ace your applications and enrol at a best-fit uni!

User Testing

We conducted user testing sessions with 6 students graduating in 2024, which was our target audience for this work. They were moderated interviews, where we showed the students the prototype and asked questions.

The image shows a user testing interface for BridgeU. At the top right is the BridgeU logo. Below it, a red robot icon with a speech bubble asks, "What best describes you right now?". Three circular icons below represent different levels of preference: 1) A worried face with sweat drops, labeled "I have not idea where to start". 2) A neutral face with a small smile, labeled "I have some idea of what I want". 3) A smiling face with large eyes, labeled "I have strong preferences". The background features a stylized illustration of buildings and trees at the bottom.

BridgeU

What best describes you right now?

I have not idea where to start

I have some idea of what I want

I have strong preferences

User Testing - Findings

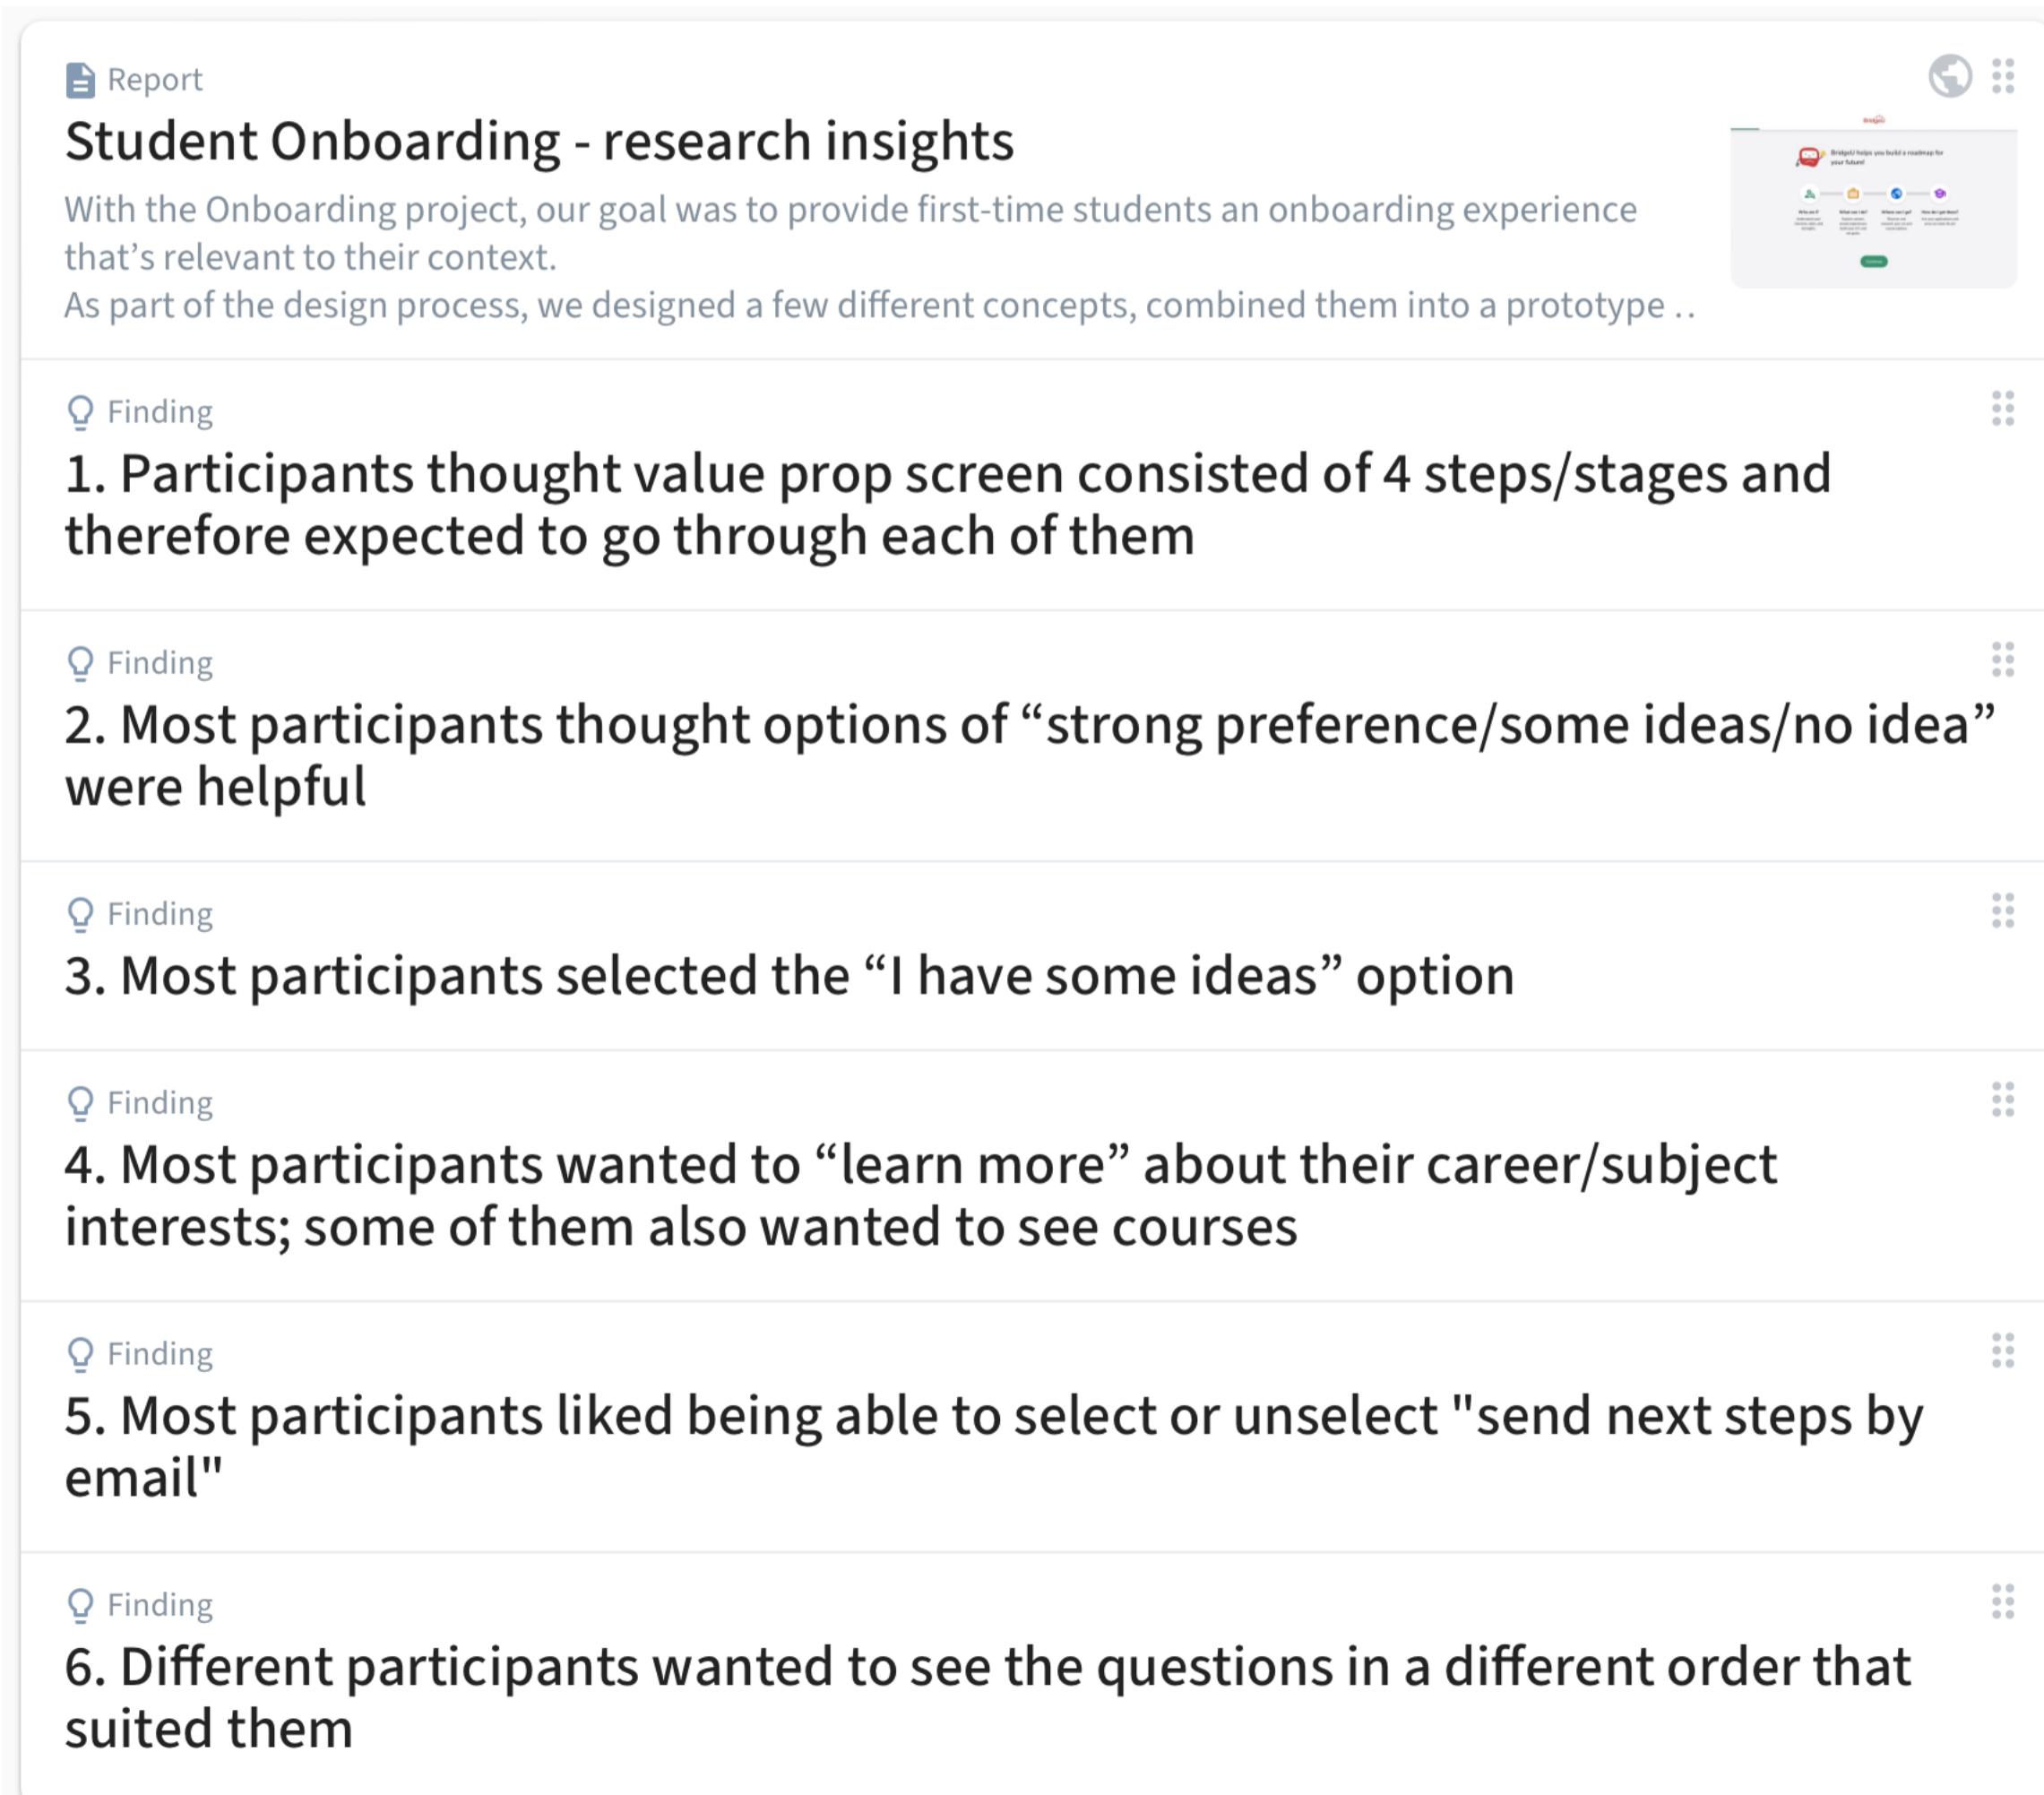

With the support of a UX researcher, I tagged all the user interviews on Condens and synthesised insights from the research. The main findings were compiled into a report.

Report

Student Onboarding - research insights

With the Onboarding project, our goal was to provide first-time students an onboarding experience that's relevant to their context.

As part of the design process, we designed a few different concepts, combined them into a prototype ..

1. Participants thought value prop screen consisted of 4 steps/stages and therefore expected to go through each of them

2. Most participants thought options of “strong preference/some ideas/no idea” were helpful

3. Most participants selected the “I have some ideas” option

4. Most participants wanted to “learn more” about their career/subject interests; some of them also wanted to see courses

5. Most participants liked being able to select or unselect "send next steps by email"

6. Different participants wanted to see the questions in a different order that suited them

MVP

Based on the insights from the user testing, we decided on what to build as the first-cut MVP. **We decided to start with a few questions we had high confidence in.** This also aligned with previous research we've done in this area - that students generally have some idea about the “**country**” or “**subject**” they’re interested in and expect that to be their starting point for university research.

	I HAVE DECIDED ALREADY	I HAVE SOME IDEAS BUT WANT MORE OPTIONS	I HAVE NO IDEA	TOTAL	WEIGHTED AVERAGE
The universities you plan to apply to	12.43% 43	60.69% 210	26.88% 93	346	2.14
The country(ies) you plan to attend university in	45.71% 160	48.86% 171	5.43% 19	350	1.60
The subject(s) you plan to study at university	36.10% 126	55.59% 194	8.31% 29	349	1.72
The career(s) or job(s) you plan to pursue after university	26.36% 92	59.03% 206	14.61% 51	349	1.88

I continued to iterate on other ideas based on the findings from the user testing.

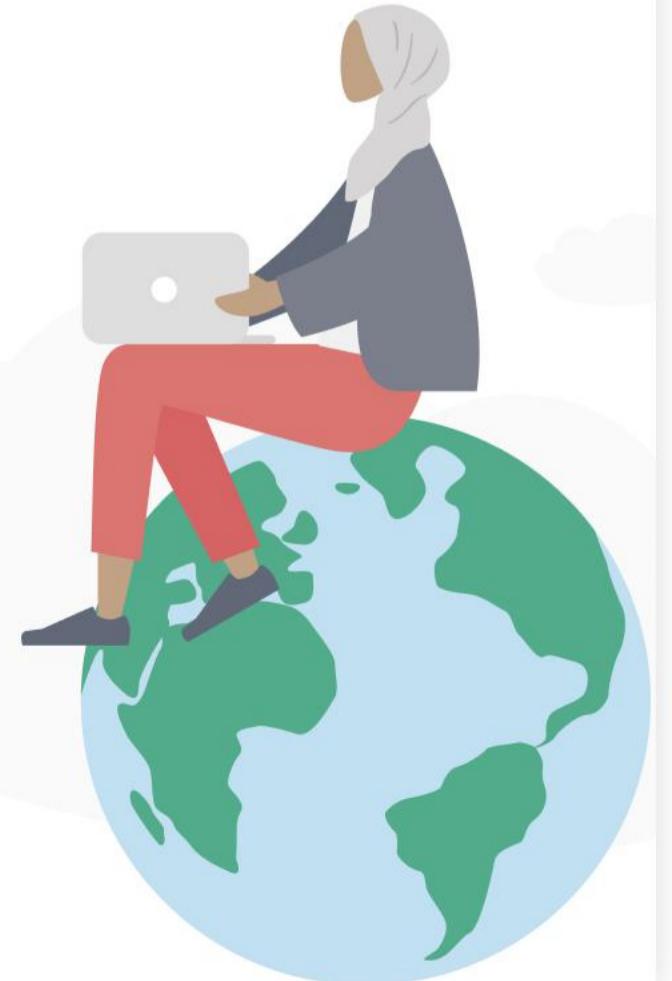

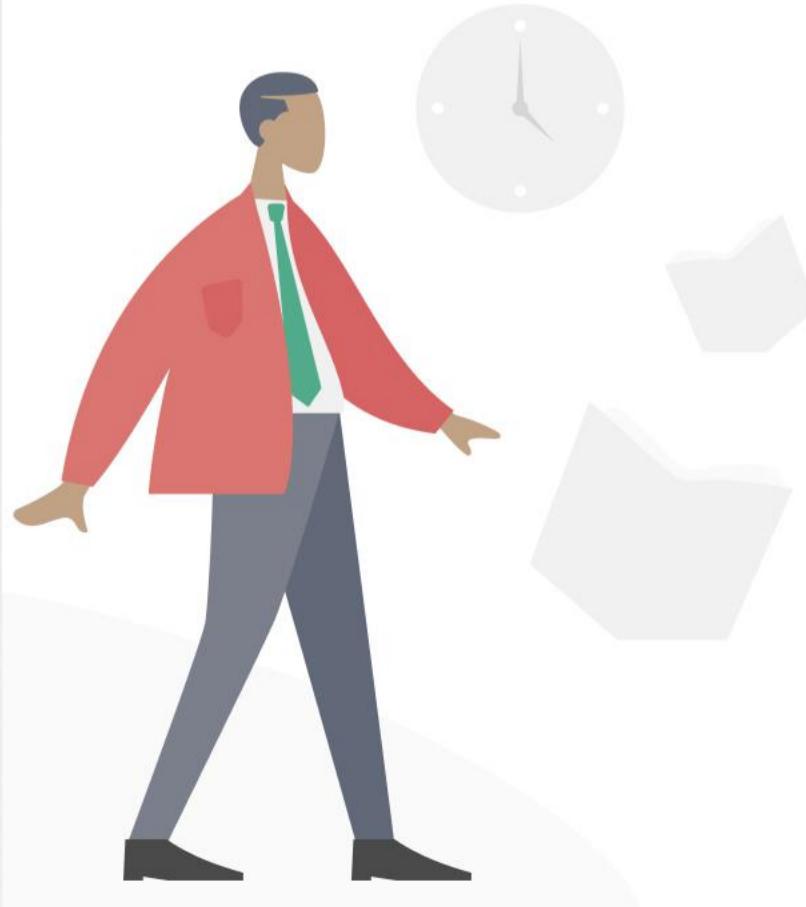

Final Designs

Hey Harry 🙌

Welcome to BridgeU! 🎉

Impact

We shipped the MVP in the last week of July. Over the next few weeks, we've seen significant impact already.

Data completion milestone: Percentage of students who have added Country or Subject preferences

Average time to add Country or Subject preference

Next Steps

This wasn't the end of the work on Onboarding. We've had some amazing insights from the user testing sessions, and we continue to monitor the impact on the metrics.

The next steps are to continue iterating on the flow based on the research findings, ship them as incremental changes, and measure how they impact the metrics.

The next areas of focus are:

- Focus on students who are just starting out
- Focus on the experience for students who have everything figured out
- Additional questions to understand the context of these two user segments
- Onward journey after Onboarding and how that aligns with the student journey

Case study

University Discovery

Background

BridgeU's mission is to connect students with their best-fit universities. Student users are at the core of this mission, and university discovery is a core part of the BridgeU platform.

Before we started working on this project, we had been hearing feedback from school counsellors that university discovery on BridgeU was cumbersome and complex. Students were losing interest and resorting to Google for university research. We set out to solve this problem and improve student engagement on the platform.

The main metrics we were focused on were

- **Number of university profile views**
- **Number of universities shortlisted by the student**

These metrics were indicators of students engaging with the platform.

User Research

At that time, we didn't have access to conduct 1:1 interviews with students directly. I conducted our user research through other methods.

1:1 user interviews with counsellors to understand how their students use BridgeU

Focus groups with up to 10 students per group, in the presence of their counsellor

User Research - Findings

- BridgeU's "University Matches" page was the primary way to discover universities. This was confusing to use.
 - Students had to answer around 20 questions in the "Profile Builder" before even seeing any university
 - They could only see 9 universities at a time. They had to "shortlist" or "discard" universities to see more.
 - There wasn't an easy way to filter the results. Students had to go back to the "Profile builder" and change their answers to filter the universities

The screenshot shows the BridgeU University Matches interface. On the left, a sidebar lists various features: Home, Strategy Advisor, Careers, Profile Builder, University Matches (which is selected and highlighted in red), Shortlist, Applications, Writing Builder, Recommendations, and Test Management. The main content area is titled "University Matches" and includes a "Back to Profile Builder" link. The interface is divided into three colored sections:

- Reach options (Orange):** Shows 3/95 results. It features a card for UCL Management Science (4 years) with a logo, UCAS code N990, a 10-15% acceptance chance, 73% preference fit, and "MORE INFO" and "DISCARD" buttons.
- Match options (Blue):** Shows 3/134 results. It features a card for The University of Edinburgh Business with Marketing with a logo, UCAS code N1N5, a 30-40% acceptance chance, 73% preference fit, and "MORE INFO" and "DISCARD" buttons.
- Safety options (Green):** Shows 3/6107 results. It features a card for The University of Edinburgh Accounting and Finance with a logo, UCAS code NN43, a 60-70% acceptance chance, 72% preference fit, and "MORE INFO" and "DISCARD" buttons.

At the top right, there are user profile icons for "SHRIHARI".

User Research - Findings

- The “Search” functionality was placed within the “Shortlist” page. This wasn’t intuitive
 - The search results were presented in a small modal. This limited the number of results that could be shown.
 - The search results combined both university and course results in the same interface. Courses from a single university often overshadowed other university results. Students were predominantly searching for universities (rather than courses) by name
- Students had to shortlist a university first before being able to look at information about the university

The screenshot shows the BridgeU platform's user interface. At the top, there is a navigation bar with links to "JOHN'S DASHBOARD", "ADVISOR'S DASHBOARD", and "MY DASHBOARD". On the far left, a sidebar menu lists various features: Home, University Visits, Strategy Advisor, Profile Builder, Universities (which is currently selected), Writing Builder, Recommendations, and Test Management. The main content area is titled "Shortlist". A search modal is open, prompting "Search for a university or course" with the query "har". Three search results are displayed: "Harvard University US" (with a "+ ADD" button), "Harding University US" (with a "+ ADD" button), and "University of Hartford US" (with a "+ ADD" button). Below the search modal, there are two cards. The first card is for Pomona, US, showing a "Match" status, 96% Preference Fit, and 45-55% Chance of Acceptance. It has "More info" and "Add Note" buttons, and a large green "ADD TO APPLICATION LIST" button. The second card is for Groningen, NL, showing a "Match" status, 94% Preference Fit, and N/A Chance of Acceptance. It also has "More info" and "Add Note" buttons, and a green "ADD TO APPLICATION LIST" button. At the bottom of the screen, there are three more university cards: Utrecht University (Liberal Arts and Sciences), Erasmus University Rotterdam (Liberal Arts and Sciences), and Princeton University.

Design Concepts

Armed with the insights from the user research, I started exploring some solution concepts as quick wireframes, and iterated on them based on internal stakeholder feedback.

The image displays six hand-drawn wireframes arranged in two columns of three, representing a user flow and various design concepts:

- Top Left Wireframe:** A survey question "WHAT COUNTRIES ARE YOU INTERESTED IN STUDYING IN?" followed by a list of countries with checkboxes. Options include Australia, Canada, Germany, Hong Kong, India, Japan, Netherlands, Spain, United Kingdom, and USA. There is also a field for "Other Countries" and buttons for "Skip" and "NEXT".
- Top Middle Wireframe:** A question "WHAT ARE YOUR TARGET GRADES?", a search bar, and a grid of boxes for input. Buttons for "Skip" and "NEXT" are at the bottom.
- Top Right Wireframe:** A header "EXPLORE MATCHES SHORTLIST". It includes a search bar, a section for "Explore by location" with buttons for USA, UK, Netherlands, and more, and a section for "Explore by subjects" with buttons for Economics, Business, Comp. Sci, and more.
- Bottom Left Wireframe:** A survey question "WHAT SUBJECT ARE YOU INTERESTED IN?", a list of subjects with checkboxes, and a "NEXT" button.
- Bottom Middle Wireframe:** A header "MATCHES SHORTLIST PREFERENCES". It shows a card for "Business Management MANCHESTER" with "SEE CHANCE OF ACCEPTANCE" and "SEE PREFERENCE FIT" buttons, and a "SHORTLIST" button. Below are cards for "Physical Sciences", "Social Sciences", and "Other".
- Bottom Right Wireframe:** A header "EXPLORE MATCHES SHORTLIST". It includes a search bar, a section for "Top Unis in USA" with four cards, and a section for "Top BUSINESS courses" with four cards.

Design Concepts

BridgeU Platform Mockups

The following mockups illustrate various design concepts for the BridgeU platform, focusing on user profiles, search results, and filters.

Top Left: A dark-themed interface showing a user profile for "Harry" and a search for "Universities in USA". It includes a sidebar with a red gradient bar, a navigation bar with "Explore", "Matches", and "Shortlist", and a search bar with "Harry".

Middle Left: A light-themed interface showing a user profile for "Harry" and a search for "Universities in USA". It includes a sidebar with a red gradient bar, a navigation bar with "Explore", "Matches", and "Shortlist", and a search bar with "Harry".

Bottom Left: A light-themed interface showing a user profile for "Harry" and a search for "Universities in USA". It includes a sidebar with a red gradient bar, a navigation bar with "Explore", "Matches", and "Shortlist", and a search bar with "Harry".

Top Right: A dark-themed interface showing a user profile for "Harry" and a search for "Universities in USA". It includes a sidebar with a red gradient bar, a navigation bar with "Explore", "Matches", and "Shortlist", and a search bar with "Harry".

Middle Right: A light-themed interface showing a user profile for "Harry" and a search for "Universities in USA". It includes a sidebar with a red gradient bar, a navigation bar with "Explore", "Matches", and "Shortlist", and a search bar with "Harry".

Bottom Right: A light-themed interface showing a user profile for "Harry" and a search for "Universities in USA". It includes a sidebar with a red gradient bar, a navigation bar with "Explore", "Matches", and "Shortlist", and a search bar with "Harry".

Approach

Based on the user research insights and the internal feedback, we had significant confidence in the design solutions. We took an iterative approach to shipping small changes and testing live in the product. We were monitoring the metrics throughout.

- Search
 - Make search easily accessible from multiple pages
 - Show results on a separate page
 - Show only “universities” as results. Show courses within universities as next step
- Quickly view university information on an overlay
- Matches
 - Browse through “matches” freely without having to discard them
 - Easily filter matches by “reach / match / safety” and by country
 - Quickly make changes to “profile builder” from the matches page
- New “Explore” view
 - Explore universities & courses by Country and by Subject
 - Filter results within “Explore” by country, subject, fees, ranking etc.

Project overview

Mobile-first Experience

Background

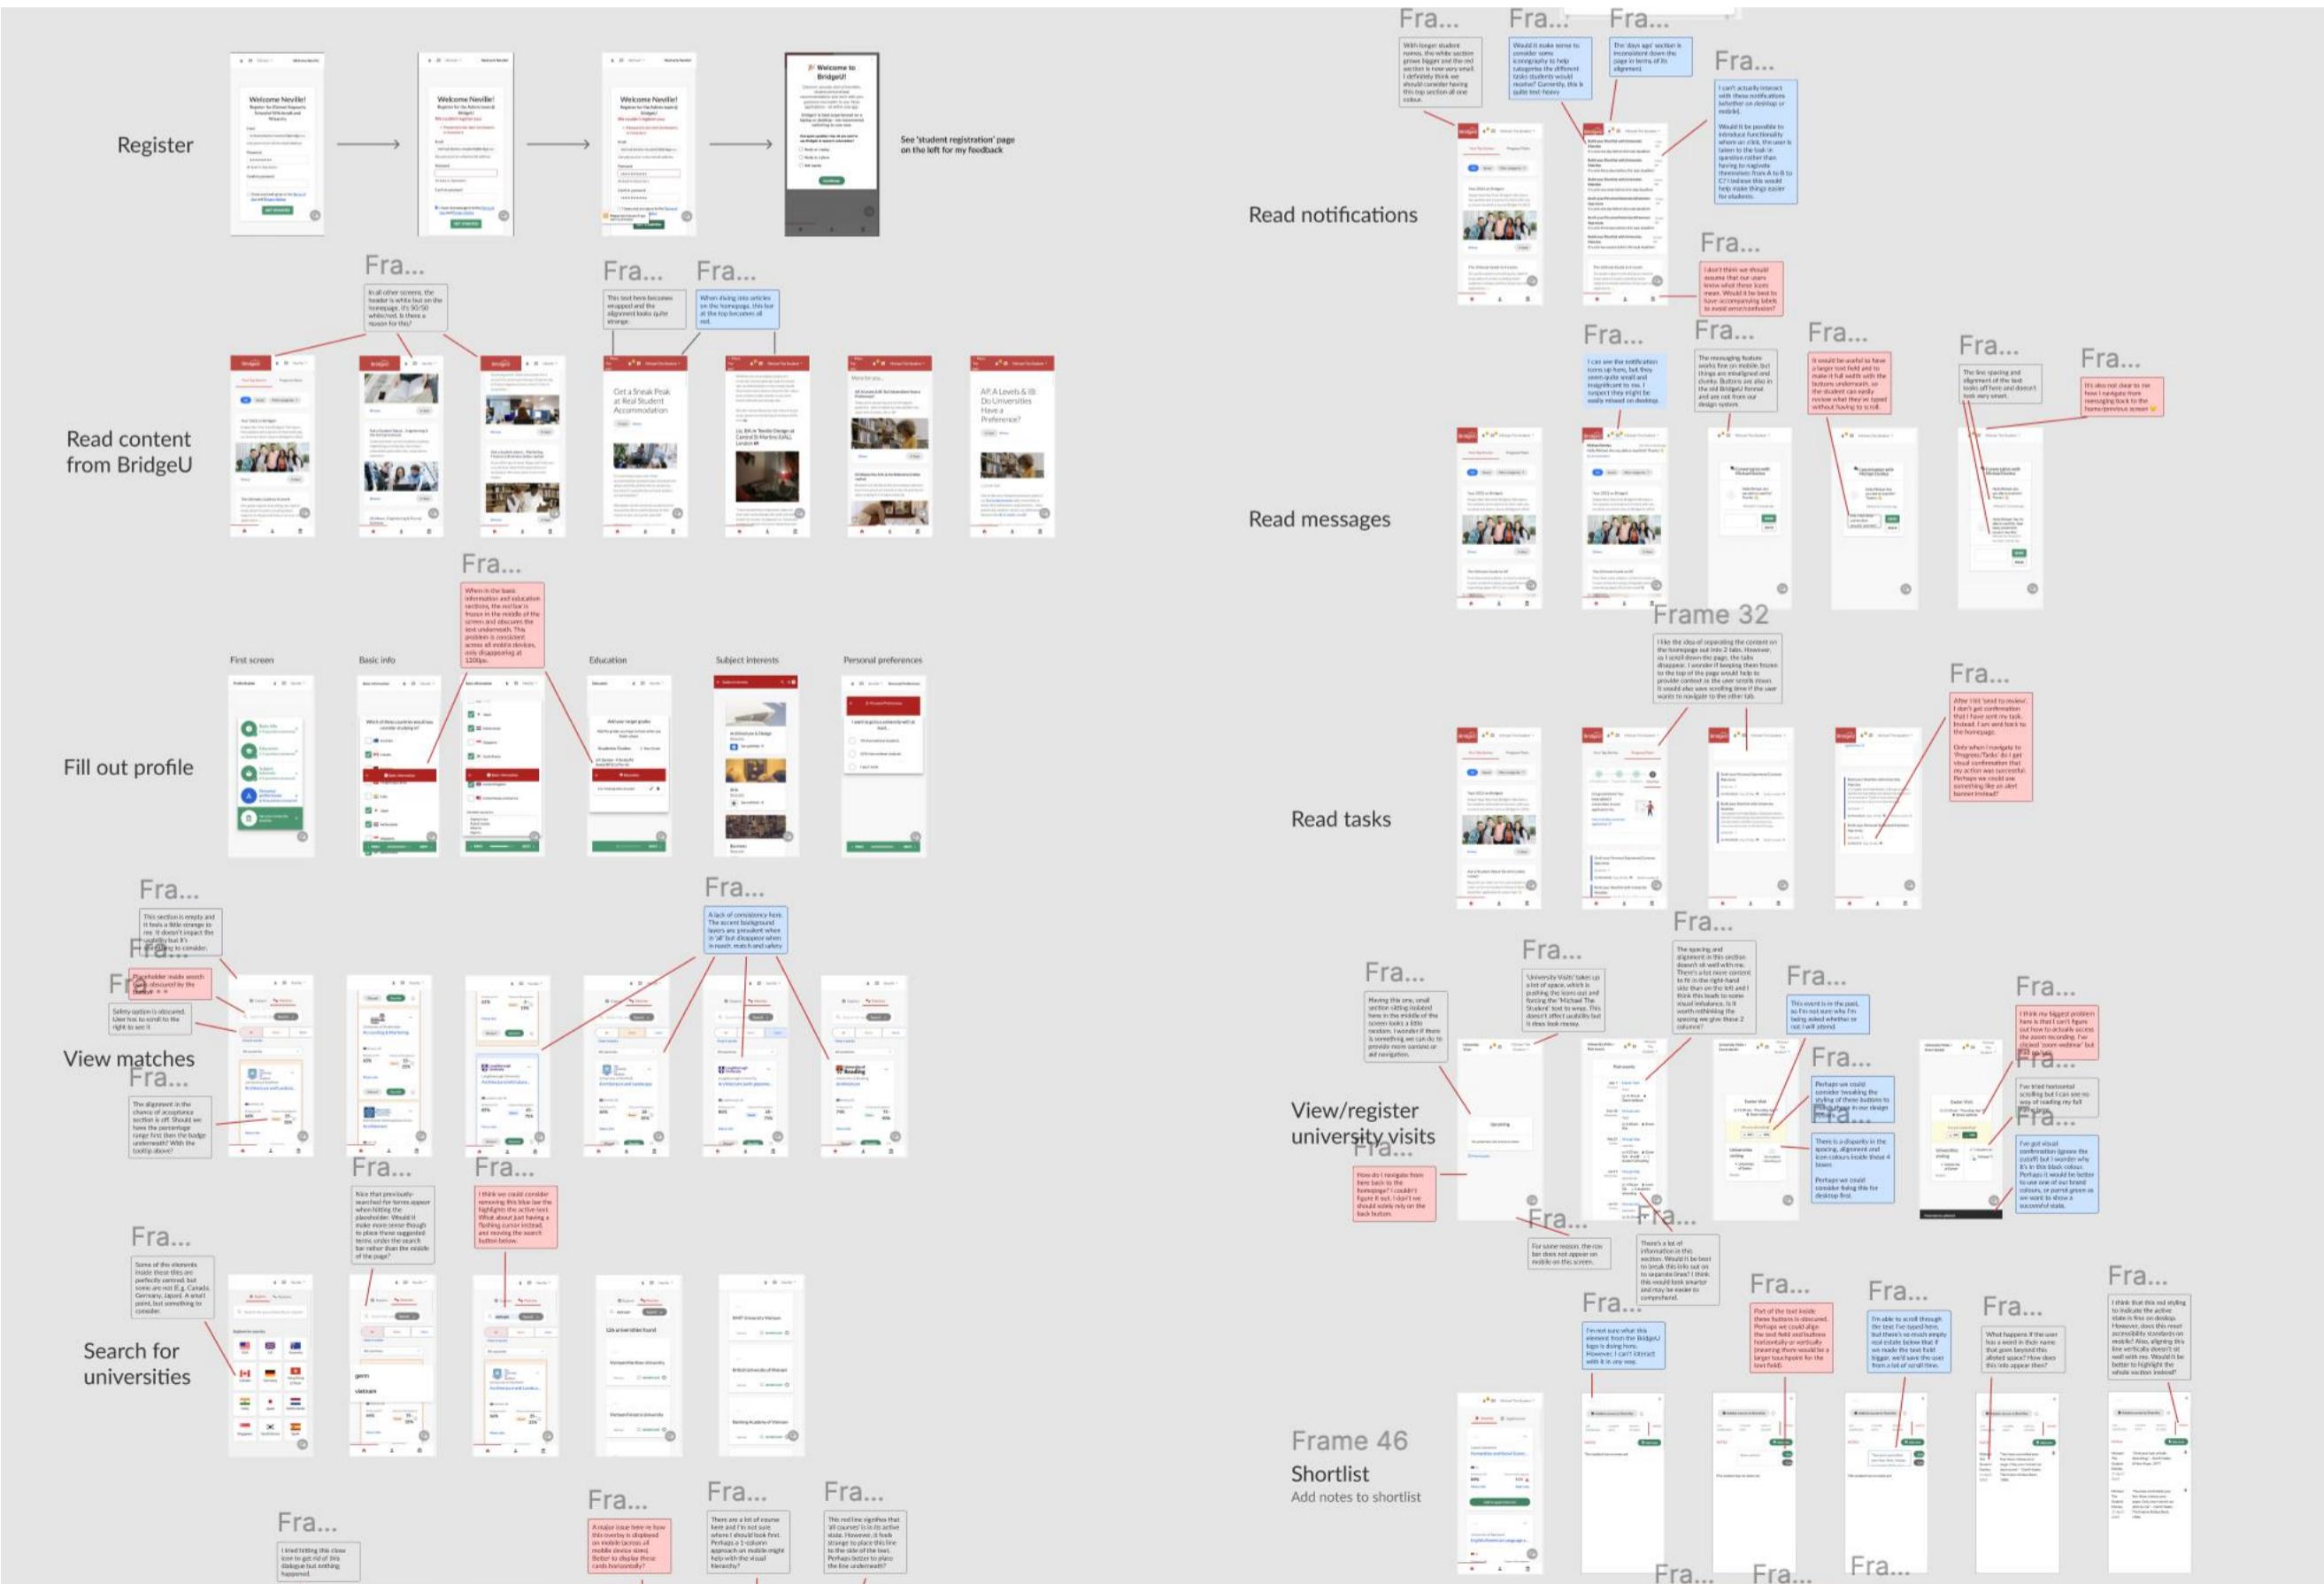

Historically, mobile had not been very important for BridgeU. Students and advisors mostly used BridgeU in a school environment on a laptop or a desktop computer. This meant that while some parts of BridgeU were responsive, most weren't optimised for use on mobile.

The situation changed in 2020 due to the pandemic. More and more students were trying to use BridgeU on their phone, and were getting frustrated with the experience.

We wanted to fix this and improve the experience on mobile devices.

Audit

We did an internal audit of all the pages of BridgeU on mobile devices, and found that most of the pages were not responsive. We identified key areas of the product which were being used heavily by the students and started by focusing on these pages.

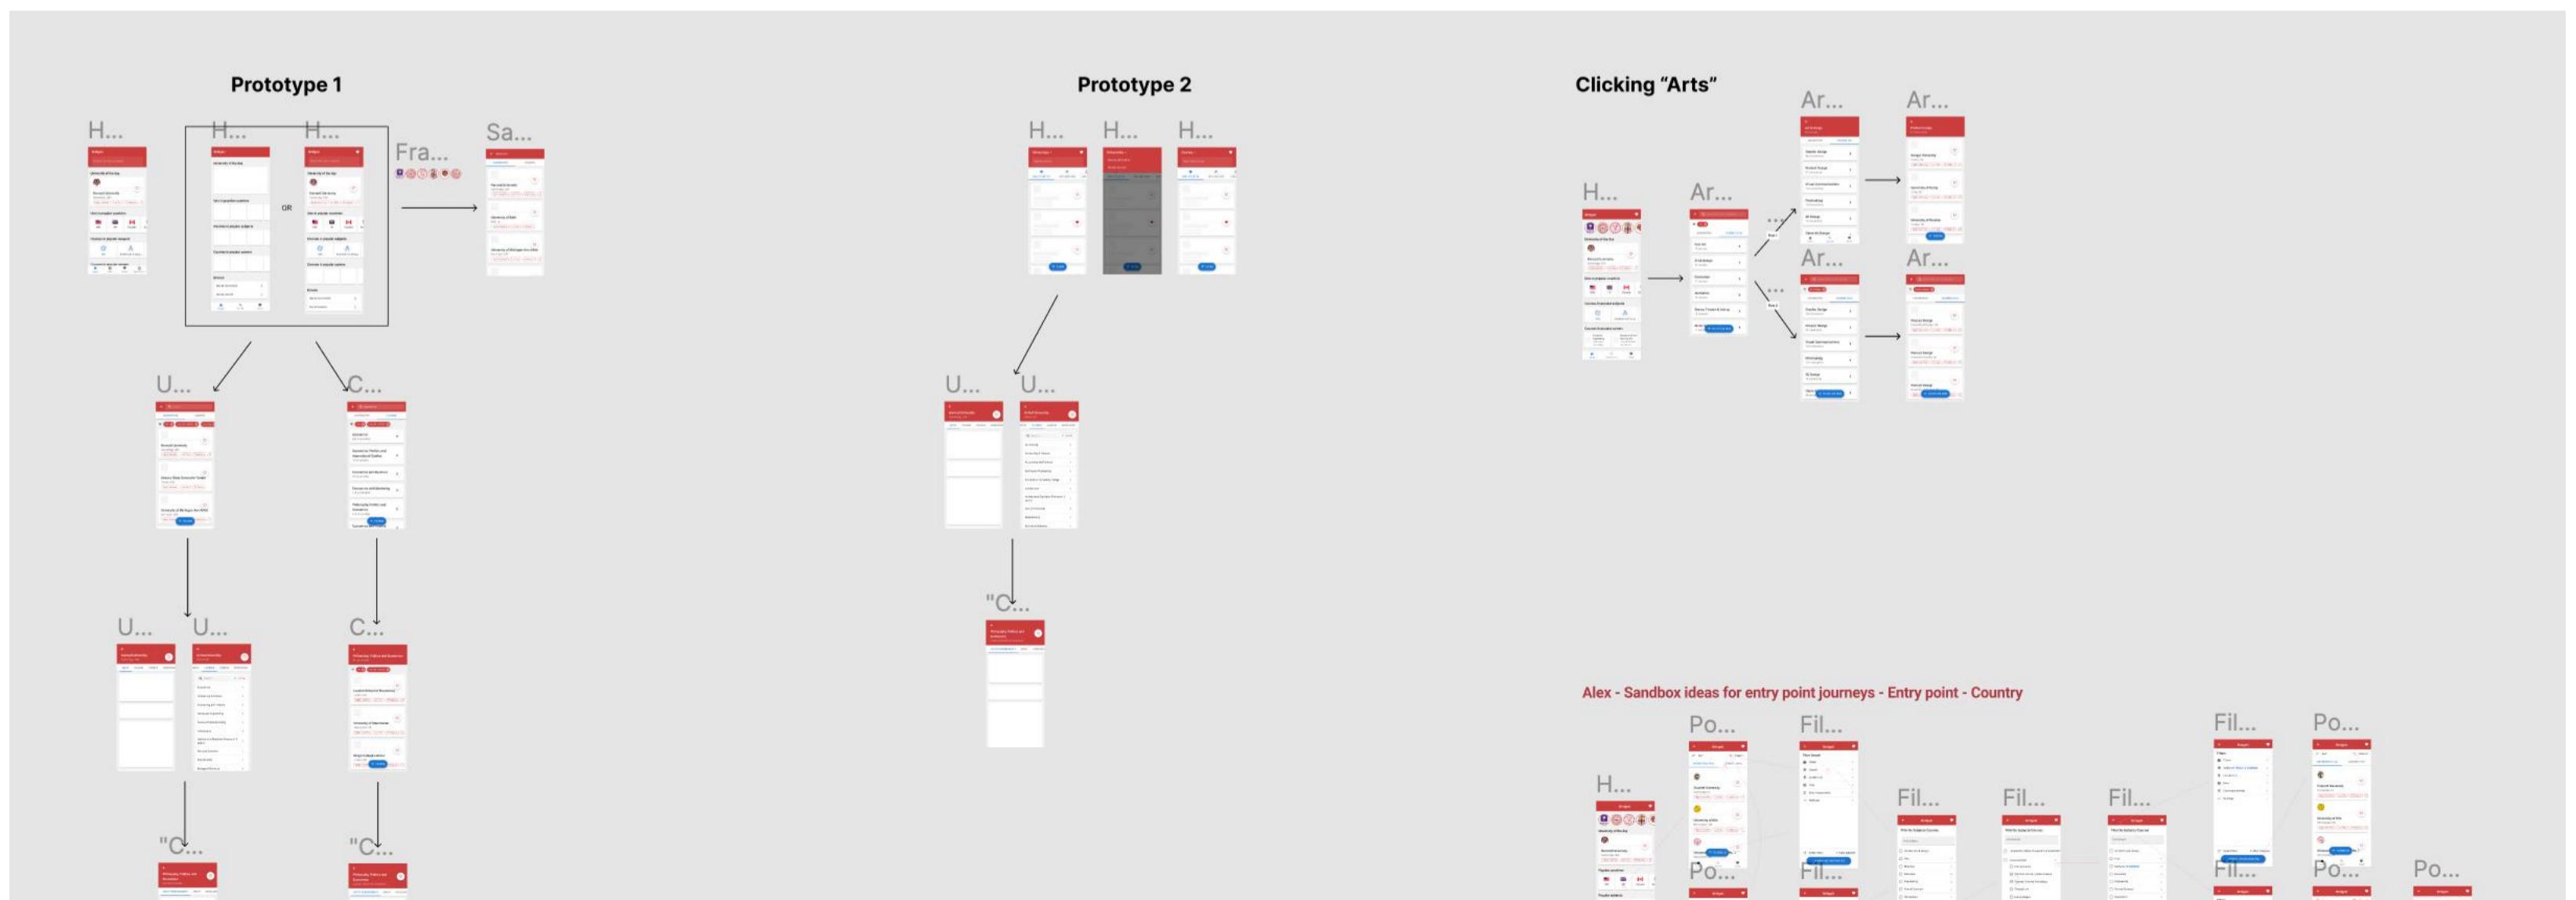

Mobile-first Approach

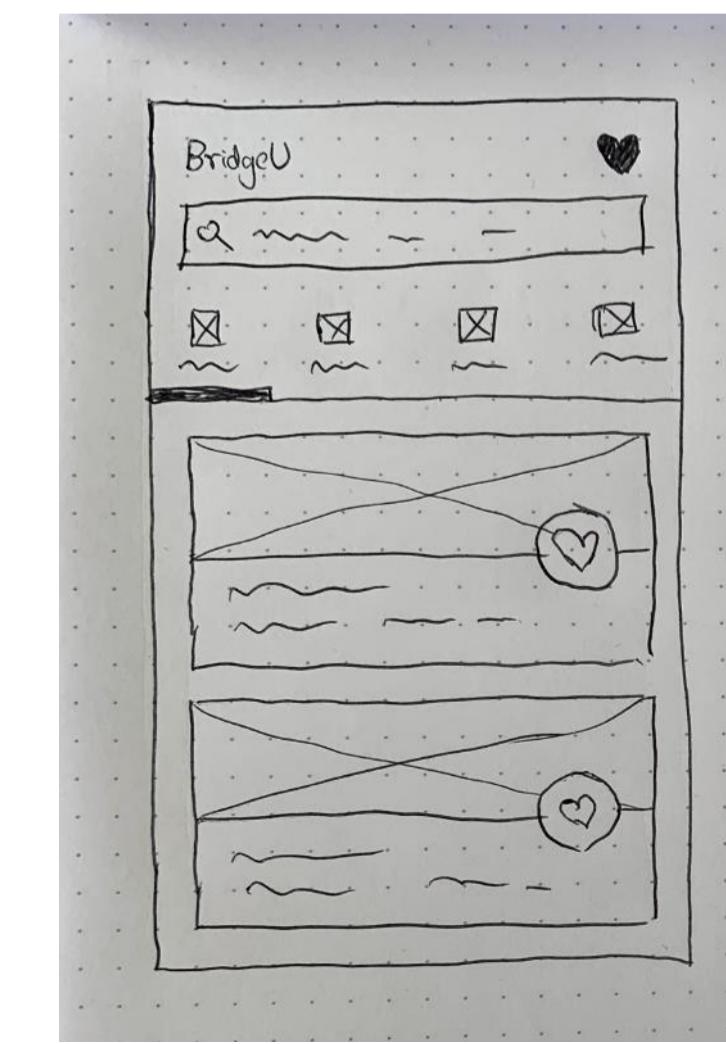

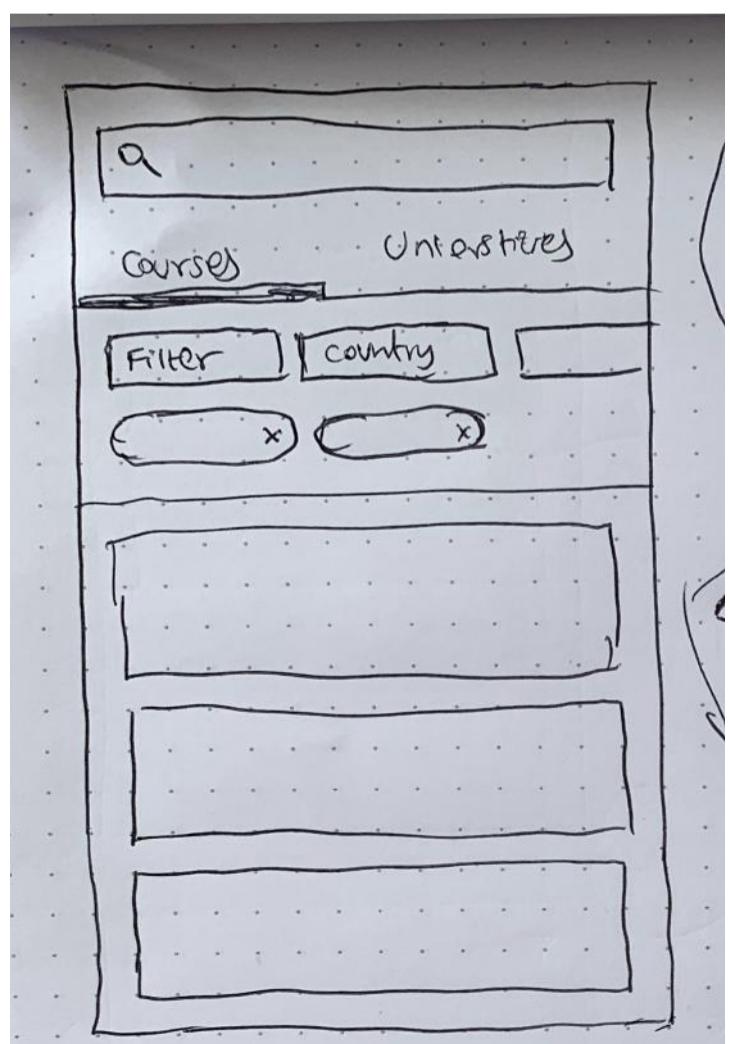

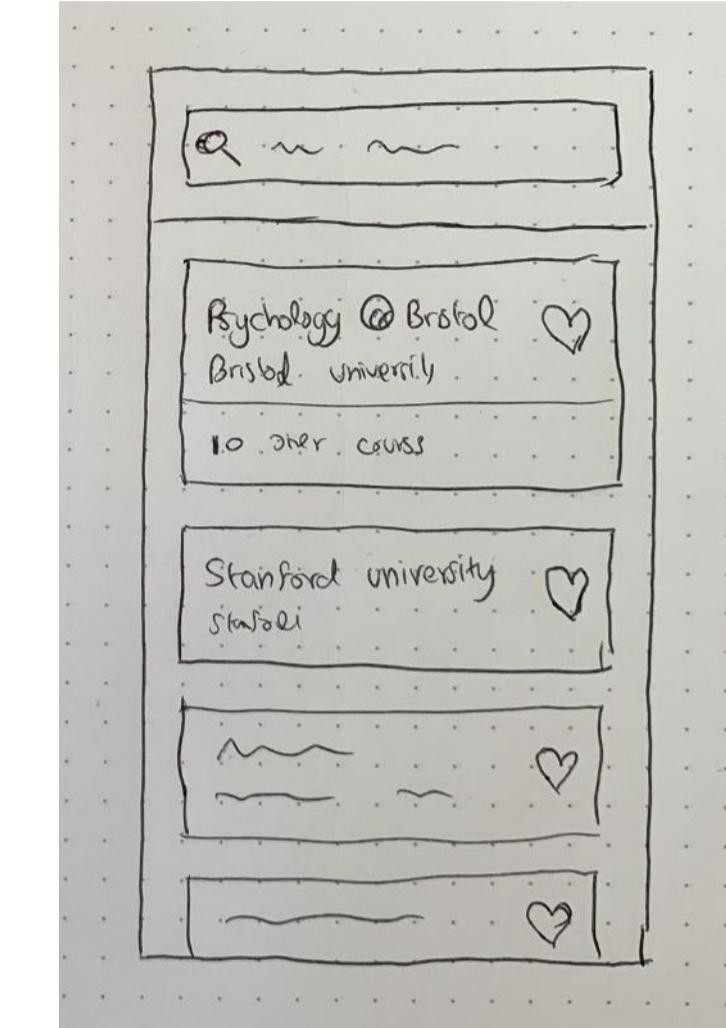

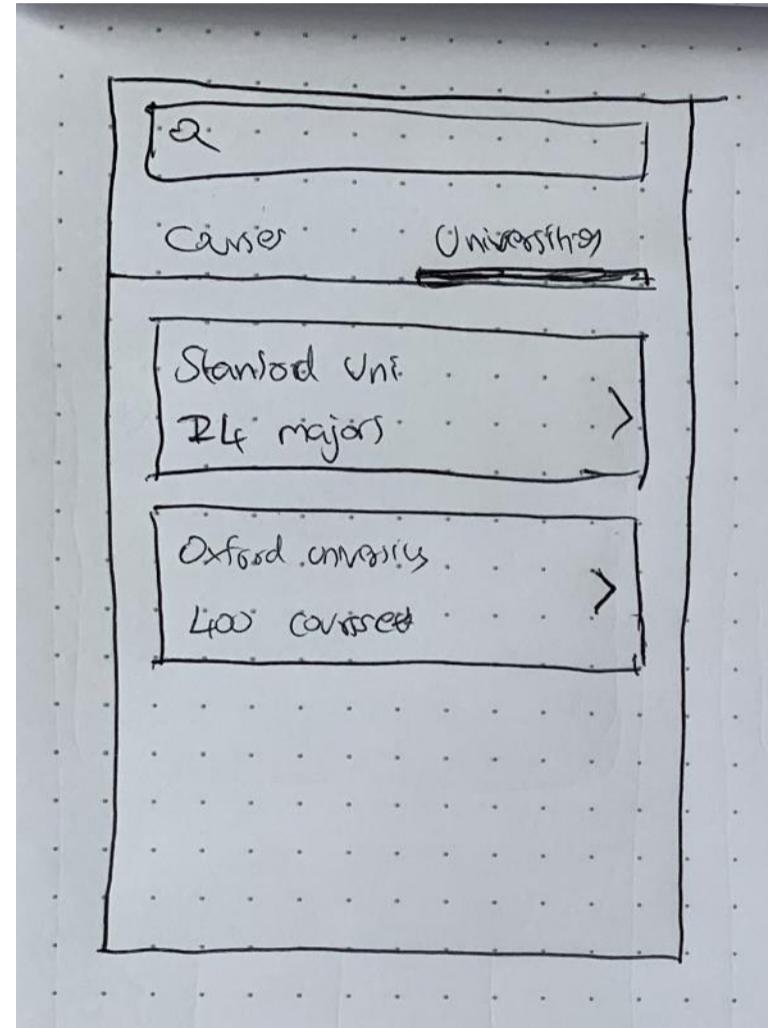

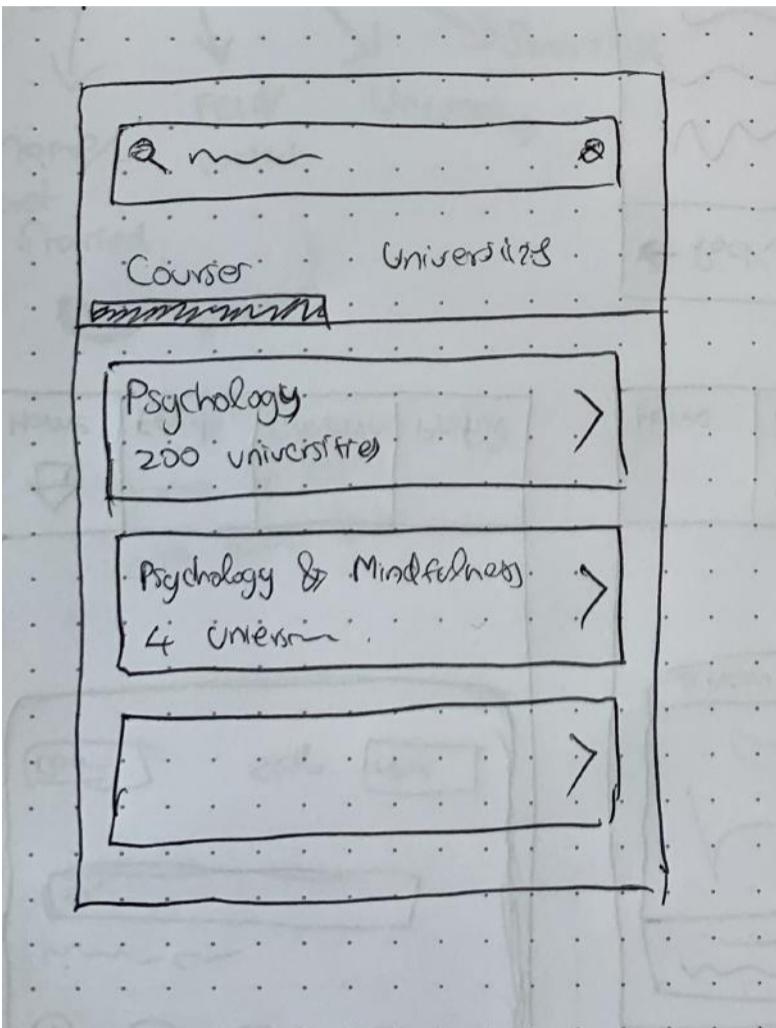

Rather than just fix the pages and make them responsive, we wanted to take a mobile-first approach and create a simplified experience tailored for use on mobile. The thinking within the team was that this could be an independent app, with a reduced set of core features.

Based on the data on the most-used parts of BridgeU and internal understanding of our users, we created a quick prototype of the core parts of BridgeU optimised for mobile. Working as a small team, we also quickly created a functional prototype in code with real data.

We set up calls with students to test this prototype and get direct user feedback. We got some great feedback from the students and made several iterations based on the feedback.

Final Solution

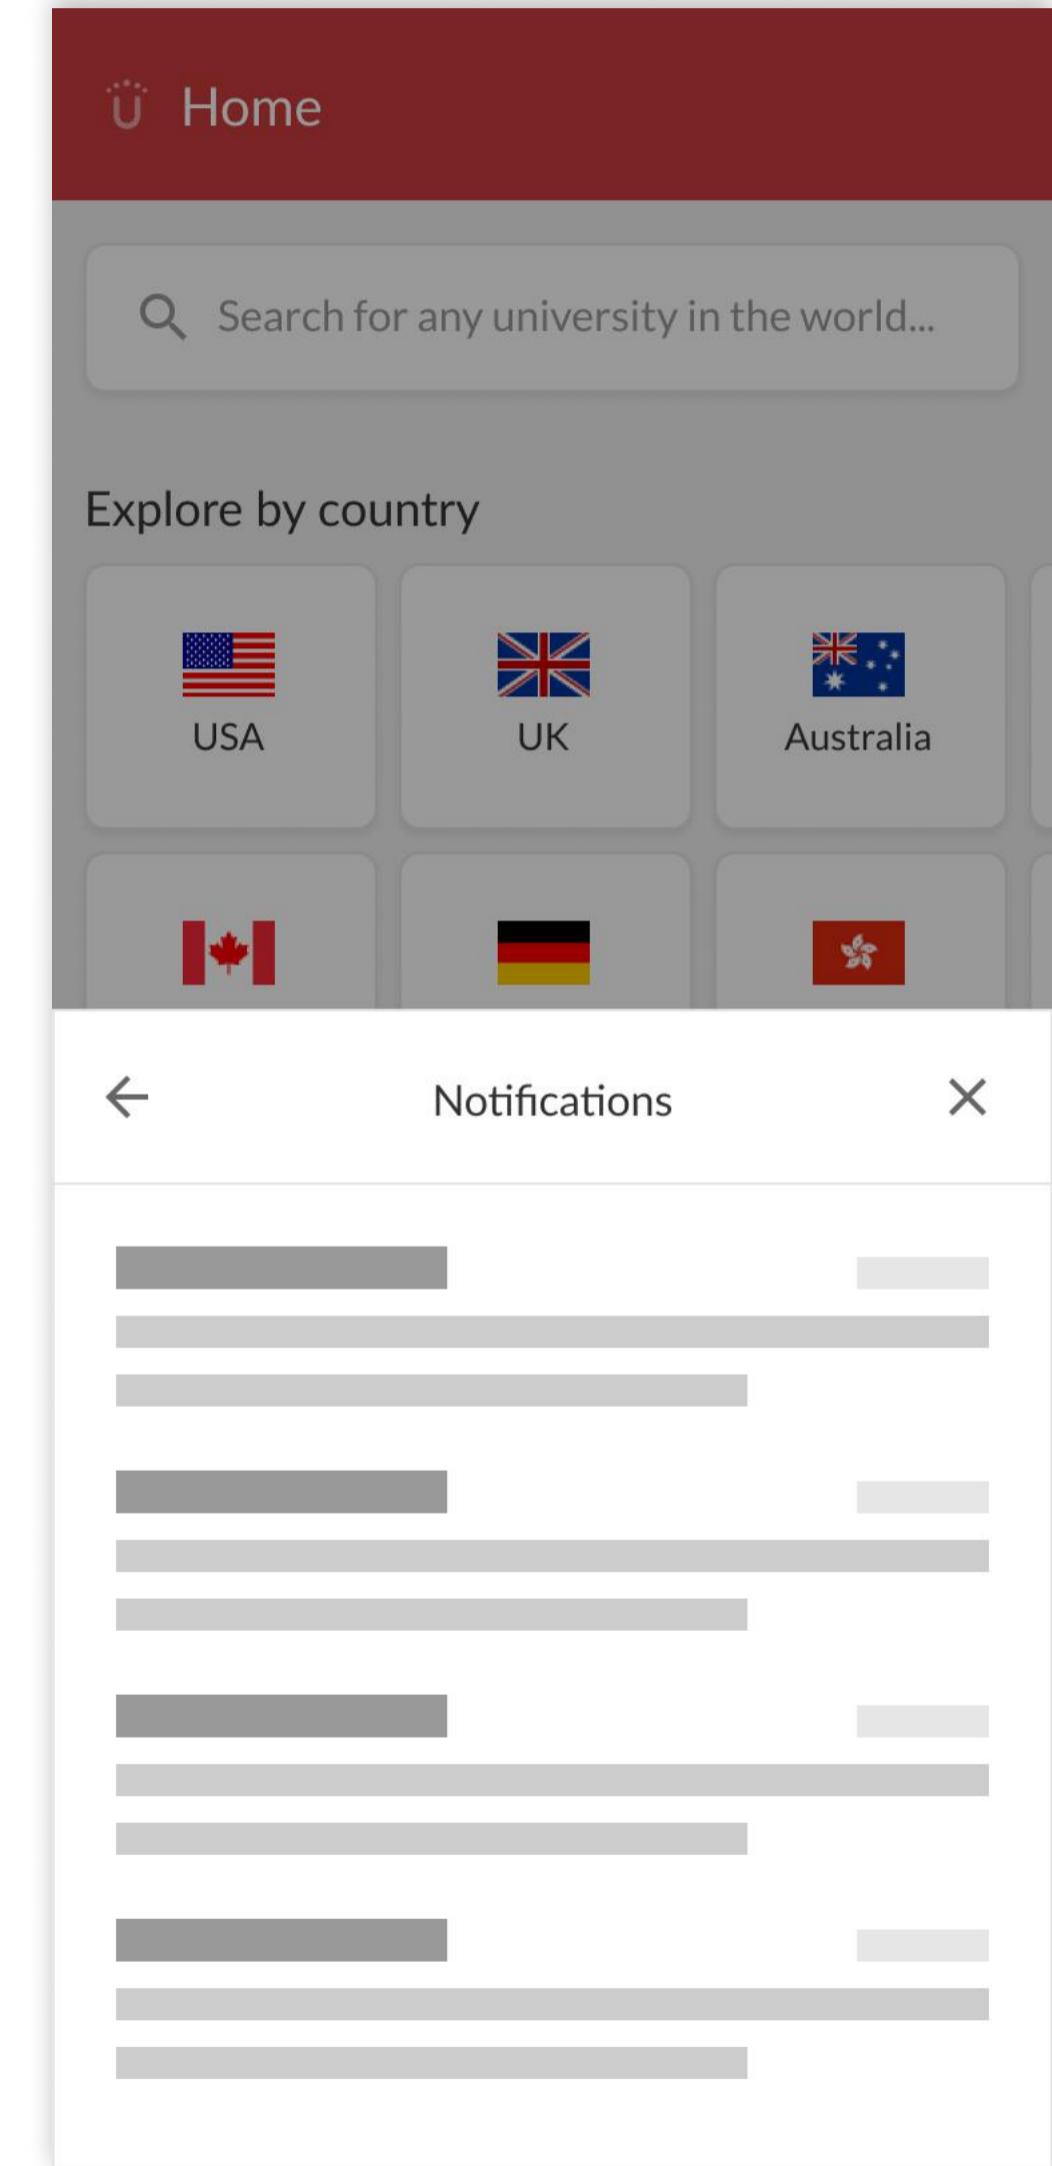

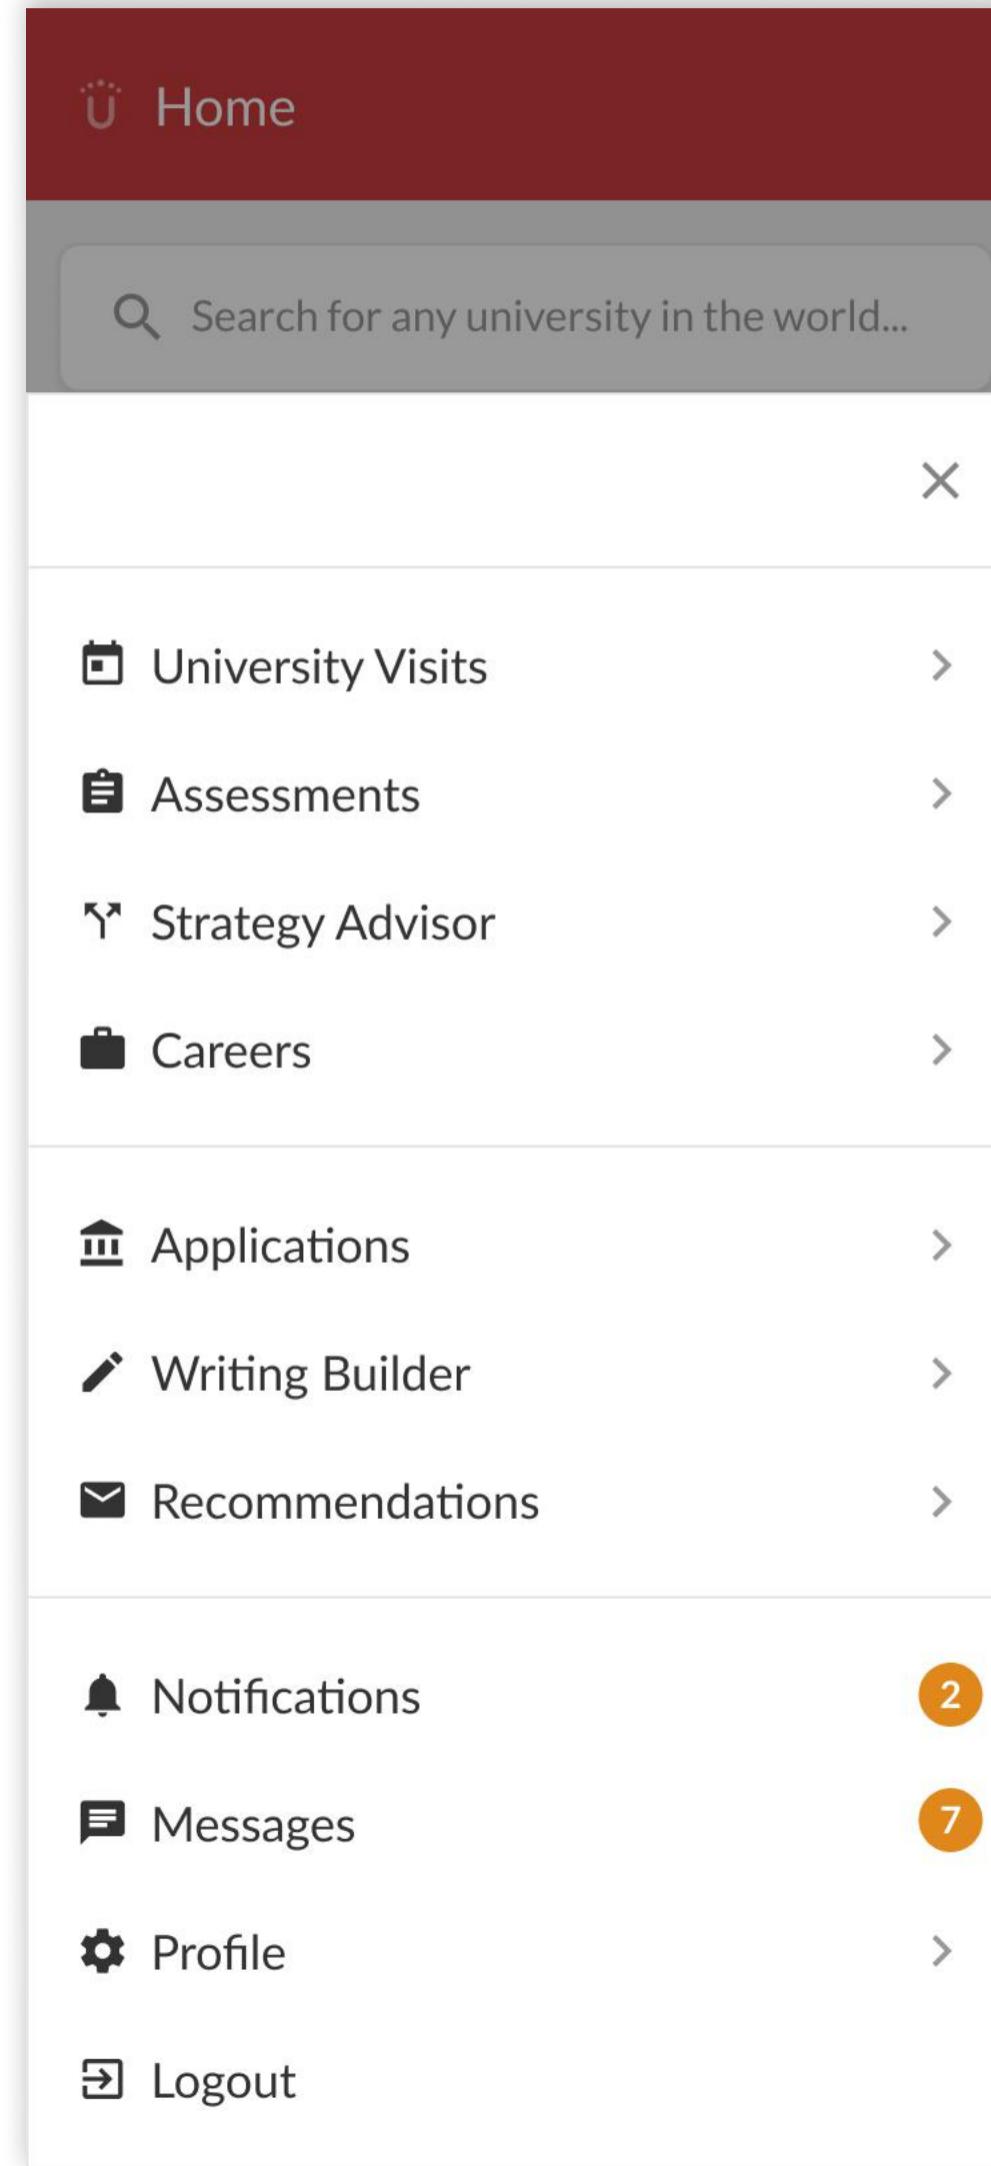

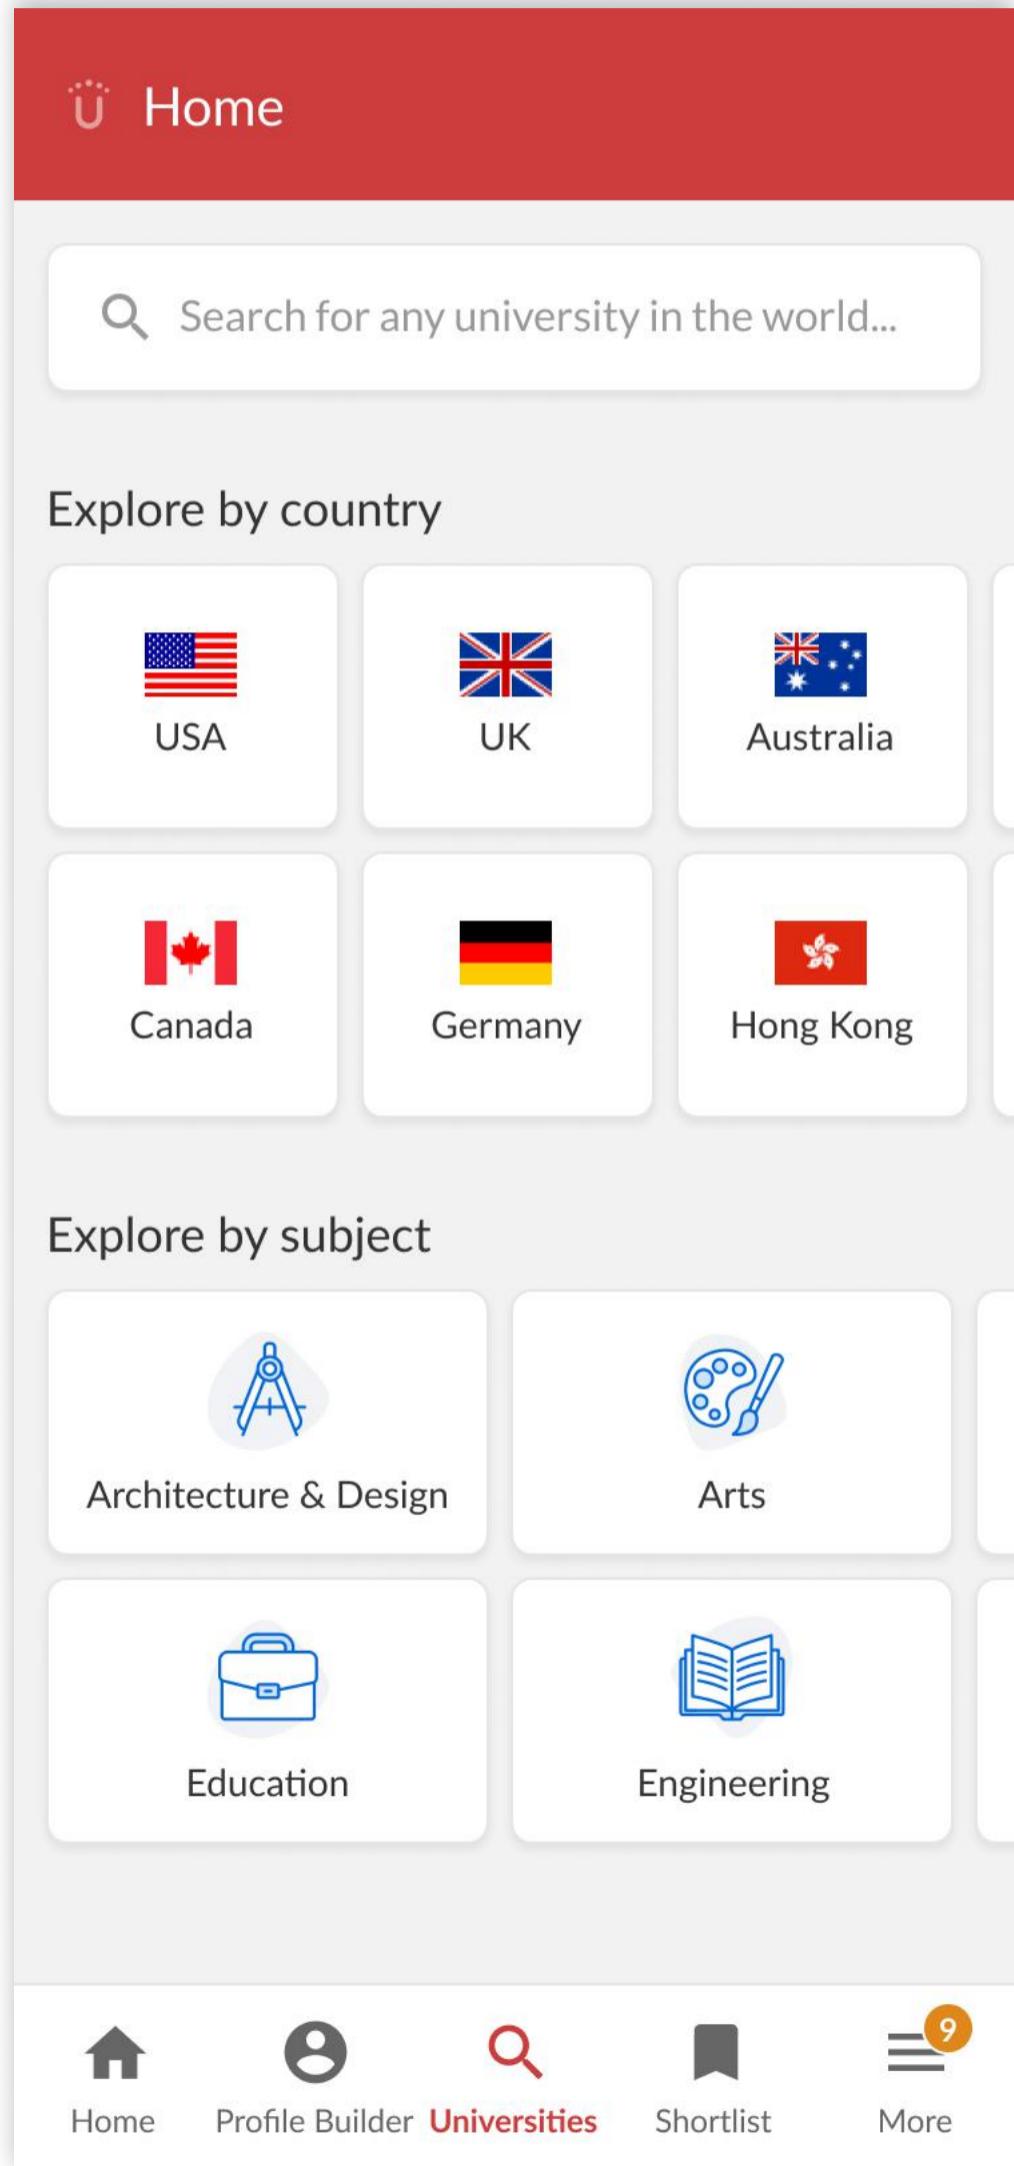

The idea of building a separate app was scrapped for business and cost reasons.

We took the learnings from the mobile-first experiment and used it to improve the experience of the core parts of BridgeU and make several important pages responsive.

The main areas of focus were:

- Easier navigation
- Notifications & messaging
- University search and discovery
- University and course profiles

ABOUT THE UNIVERSITY

Harvard University is a private Ivy League research university in Cambridge, Massachusetts, with about 6,700 undergraduate

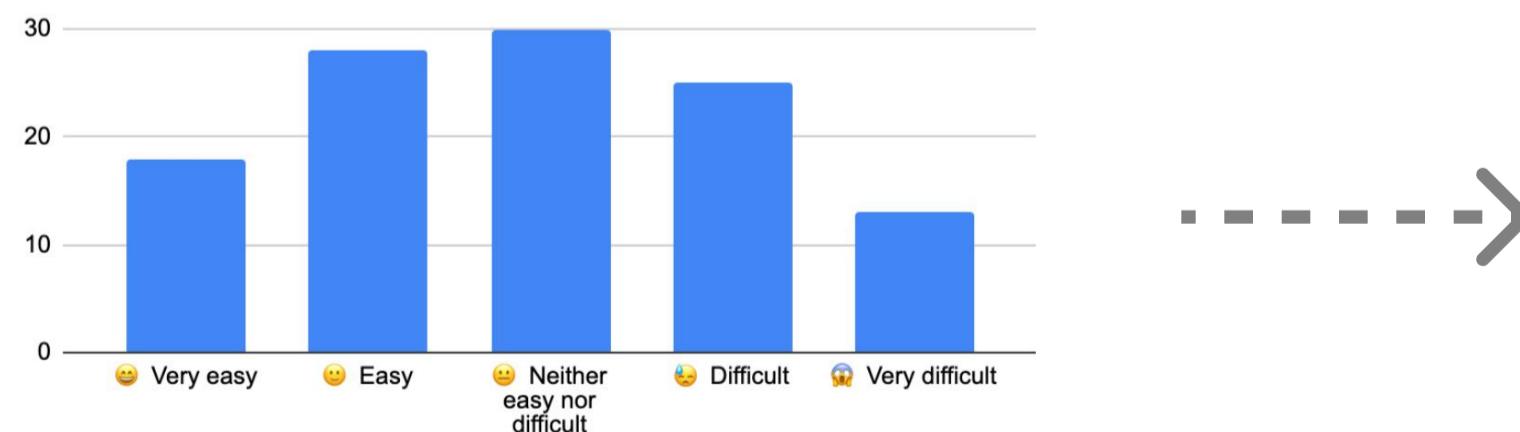

Add to Shortlist

Impact

We established an “Effort Score” metric for users on mobile devices. We asked students how easy/difficult it was to use BridgeU on mobile. We tracked the metric before and after making changes to the experience. We saw a **20% improvement** in the Effort Score.

“Effort Score” for users on mobile devices (on a scale of 5)

Project overview

Student Overview

Background

This was part a series of projects internally referred to as “Advisor UX”. A series of UX improvements to cater to the “advisor” persona of BridgeU

This was one of the earliest major projects I worked on at BridgeU.

At that time, we'd been hearing from the advisors for a while that they were struggling with certain parts of the product. So, we set out to investigate, understand and improve the experience for these users.

About the “Advisor” persona

School advisors (or counsellors) help and guide students with their university research and application process. As part of this job, it is important for advisors to keep track of students interests and preferences. In addition to this, advisors regularly meet with students to discuss their ambitions and aspirations and guide them accordingly.

Research

As part of the user research, we conducted interviews with 18 advisors. In these interviews, we seeked to understand:

- the “day in a life” of an advisor
- what parts of BridgeU they used the most
- what parts of BridgeU they used the least
- what were their likes and frustrations about BridgeU
- etc.

Opportunity Area

As a result of the research, we understood the key needs of our advisor users. We identified several key areas of the product, where we could intervene with solutions to improve the user experience.

The opportunities varied in size from minor improvements to complete overhauls of certain pages.

Out of these, the biggest need was in the “Students” page of the product. **This is where advisors spent around 80% of their time on BridgeU.** A huge part of their day-to-day was reviewing what the students have been doing on BridgeU, and making notes about it to discuss with the student later. This is where we decided to start with.

The screenshot shows the BridgeU Students dashboard. The top navigation bar includes the BridgeU logo, a search bar, and a user profile for Shrihari. The left sidebar lists various sections: Your Dashboard, Your Tasks, Student Tasks, Applications, Documents, Scuola Michelangelo, School Dashboard, Students (highlighted in red), All Student Tasks, University Visits, and University Connect. The main content area displays a table of students with columns for Student (with a checkbox and profile icon), Email, Assigned advisor (with a profile icon and name), Shortlisted (count 7), Applications (count 4), and Assigned tasks (count 1). Below this, there are rows for Michel, Shrihari; Nicholson, Jack; Park, Maya; Reaves, Keanu; Student, Ricardo; and Travolta. Each row includes a 'Jump to' and 'Actions' button. At the bottom, there are '+ SET TASK' and '+ ADD STUDENT' buttons.

Student	Email	Assigned advisor	Shortlisted	Applications	Assigned tasks
Michel, Shrihari	shrihari+michel@bridge-u.com	Shrihari A. 7	4	1	Jump to Actions
Nicholson, Jack	bria.francesco+nicholsonmiche@gmail.com	Federico F. 3	3	4	Jump to Actions
Park, Maya	sanchita+maya@bridge-u.com	No advisor assigned 0	0	0	Jump to Actions
Reaves, Keanu	shrihari+keanu@bridge-u.com	No advisor assigned 0	0	0	Jump to Actions
Student, Ricardo	ricardo+student@zartis.com	Ricardo A. 0	0	0	Jump to Actions
Travolta		Piernpolo			

Problems with the Existing experience

At the time, the only way to view what a student had done on BridgeU was to “**impersonate**” the user. It meant viewing the student’s account just as a student would see it.

This wasn’t ideal because the student-side of the platform was designed to be viewed by students and it was optimised for them. When an advisor used it, it took them longer to do a quick review.

And, there was no way to take “notes” about students within BridgeU. Advisors were using their own notepads and notes app to do this.

We decided to get started by focusing on these issues.

A blurred screenshot of a web application interface. At the top, there is a dark header bar with a user icon and the text "You are viewing Reuben's account". To the right of this are three navigation links: "REUBEN'S DASHBOARD", "ADVISOR'S DASHBOARD", and "MY DASHBOARD". Below the header, the main content area is mostly blurred, showing various sections and data points that are illegible due to the blurring effect.

MVP

As an MVP and to test our hypothesis, we designed a simple summary page for the advisor, with a simple Notes functionality.

The screenshot shows the BridgeU platform interface. At the top, there is a red header bar with the BridgeU logo and the name "Harry Potter". On the far right of the header are icons for a megaphone, a bell with a notification count of 5, a message bubble, and the word "SYBIL".

The left sidebar is titled "Sybil" and contains the following navigation items:

- Your Dashboard
- Your Tasks
- Student Tasks
- Applications
- Documents
- Hogwarts School
 - School Dashboard
 - Students
 - All Student Tasks
 - Reference Letters
 - Staff
 - Documents Sending
 - Analytics
 - School Settings

The main content area displays a student profile for "Harry Potter". The profile includes a circular profile picture, the name "Harry Potter", and three buttons: "EDIT", "MESSAGE", and "VIEW AS STUDENT". Below the profile, there are sections for "Basic info" and "Academic".

Basic info:

- Age: 15
- Gender: Male
- Currently living in: United Kingdom
- Consider studying in: United Kingdom, United States of America, Netherlands

Academic:

- UK System - A levels/AS levels/BTECs/Pre-U
- A* in Accounting (A Level)
- A* in Ancient History (A Level)
- A in Biology (A Level)

Subject interests:

- Defense against Dark Arts
- Potions
- Quidditch
- Care of Magical Creatures

Personal preferences:

- At university I want to meet new people every year
- I want my class size to be small groups, seminar style
- I want to have a high salary
- I want to have good employability
- I want to be assessed by coursework
- Regions of United States of America I'd like to live in: East Coast, The Midwest
- I feel energized when I'm in really large, bustling cities

MVP

It was very well received. The number of times advisors were using “impersonations” fell drastically. We also got great feedback from advisors.

We spoke to advisors again. We spoke to around 8 users. The goal was to understand what was working for them with the new summary page, and what other information they would like to see on the summary page.

The answers varied amongst the advisors. And also varied by the time of the year. In summary, they wanted to be able to look at different information about students at different points in time. They wanted to be able to review it quickly for several students.

The screenshot shows the BridgeU platform interface for a student named Harry Potter. The top navigation bar is red, featuring the BridgeU logo, the student's name "Harry Potter", and various icons for notifications and user management. On the left, a sidebar menu lists "Your Dashboard", "Your Tasks", "Student Tasks", "Applications", "Documents", and sections for "Hogwarts School" (School Dashboard, Students, All Student Tasks) and "Reference Letters". The main content area displays Harry's profile picture and basic information: Name (Harry Potter), Edit, Message, and View as Student buttons; Email (hpotter@hogwarts.com); Assigned advisor (Sybil Trelawney); Basic info (Age: 15, Gender: Male, Currently living in United Kingdom, Consider studying in United Kingdom, United States of America, Netherlands); Academic info (UK System - A levels/AS levels/BTECs/Pre-Us, A* in Accounting (A Level), A* in Ancient History (A Level), A in Biology (A Level)); and Subject interests and Personal preferences sections. The "Notes" tab is currently selected in the top navigation.

Final Designs

We expanded on the MVP and made it a quick overlay from within the “Students” page. This way, the advisor could access multiple students very quickly. This was also a design pattern that we could envision reusing across other parts of the product.

The screenshot shows the BridgeU student dashboard. On the left, there's a sidebar for "Shrihari" with links like Your Dashboard, Your Tasks, Student Tasks, Applications, Documents, and Scuola Michelangelo. Under Scuola Michelangelo, there are links for School Dashboard, Students, All Student Tasks, University Visits, University Connect, Assessments, Reference Letters, Staff, Document Sending, Analytics, and Insights. The main area is titled "Students" and shows a search bar and filters. A detailed view of Harry Potter is overlaid on the page. Harry's profile includes his name, email (h.potter@hogwarts.com), assigned advisor (Albus Dumbledore), and graduation year (2020). Below his profile, there's a section for "UPCOMING DEADLINES" for Northeastern University, showing "Early Action One" on 10 November 2019, with 1 / 4 documents sent. The "ASSIGNED TASKS" section lists several tasks: "Complete the Strategy Advisor" (Done, 24 Jun 2019), "Build your Shortlist with University Matches" (In review, 24 Jun 2019), "Draft your personal statement" (In progress, 24 Jun 2019), "Research shortlisted universities" (In progress, 24 Jun 2019), and "Assessment (16 Personalities)" (Done, 24 Jun 2019). The "RECENT ACTIVITY" section shows three items: "Pranay M. (staff) has shortlisted Universität Freiburg on Reuben A.'s application" (2 days ago), "Rafik D. (admin) has sent a recommendation request to Rafik on behalf of Reuben A." (7 days ago), and "Pranay M. (staff) has discarded the course International on Japan in East Asia" (about 1 month ago). To the right of the main content, there's a vertical sidebar with sections for SUMMARY, GRADES & SCORES, DOCUMENTS, NOTES, CAREERS, EXPERIENCES, ASSESSMENTS, PROFILE BUILDER, UNIVERSITIES, WRITING, and RECOMMENDATIONS.

Internal project

Design System

Background

At BridgeU, I have been championing and leading our design system efforts, collaborating with other designers and developers. When I joined BridgeU as the only designer, there was no design system in place. I worked closely with a front-end lead at that time in building a component library in Sketch and building the same in code. The components were documented in a Storybook.

Since then, the component library has moved to Figma and the design team has grown to 7 designers. The design system has gone through numerous changes and improvements. I was instrumental in establishing processes within the design team and across the dev team to keep the design system up to date, and avoid unnecessary one-off changes.

It's a continuous work in progress. Today, **around 90% of all designs re-use styles and components from the library**. We're always trying to improve this number. The coverage is not the same on the live product. There are a lot of older parts of the platform which don't use these components. There is an ongoing effort led by me and the front-end lead to fix these pages.

Other past work

- Freshcaller
- Movie Monkey
- Kontactr

Freshworks (2015-2018)

Freshcaller

Freshcaller

Freshcaller is a SaaS Call Center product which I designed at Freshworks.

I designed the product from scratch - from understanding the business & user requirements, and conducting user research. The initial stages involved a lot of wireframing, user testing and iterating on the wireframes. I did the complete visual design of the product, working with the frontend developers to implement the designs. I also worked on the code writing HTML and CSS.

Over the course of my role at Freshworks, we took this product from Zero to One, gained our first customers and added a lot of new features based on user feedback.

Website: <http://freshcaller.com>

User Research

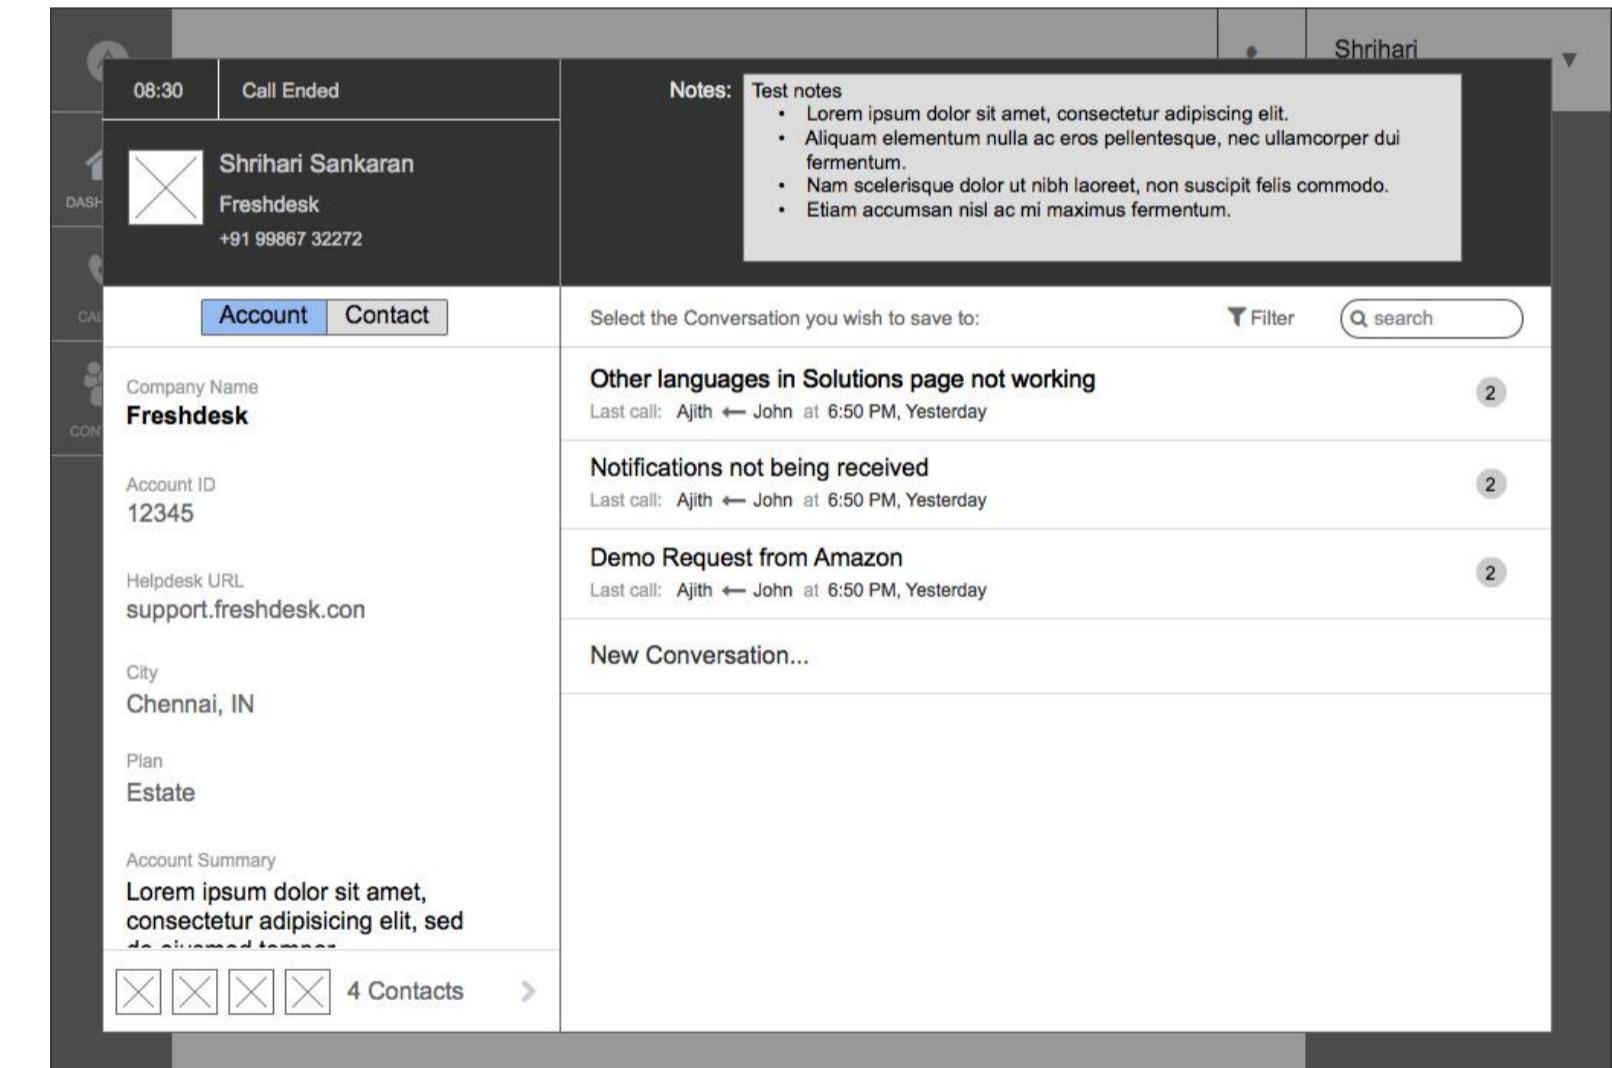

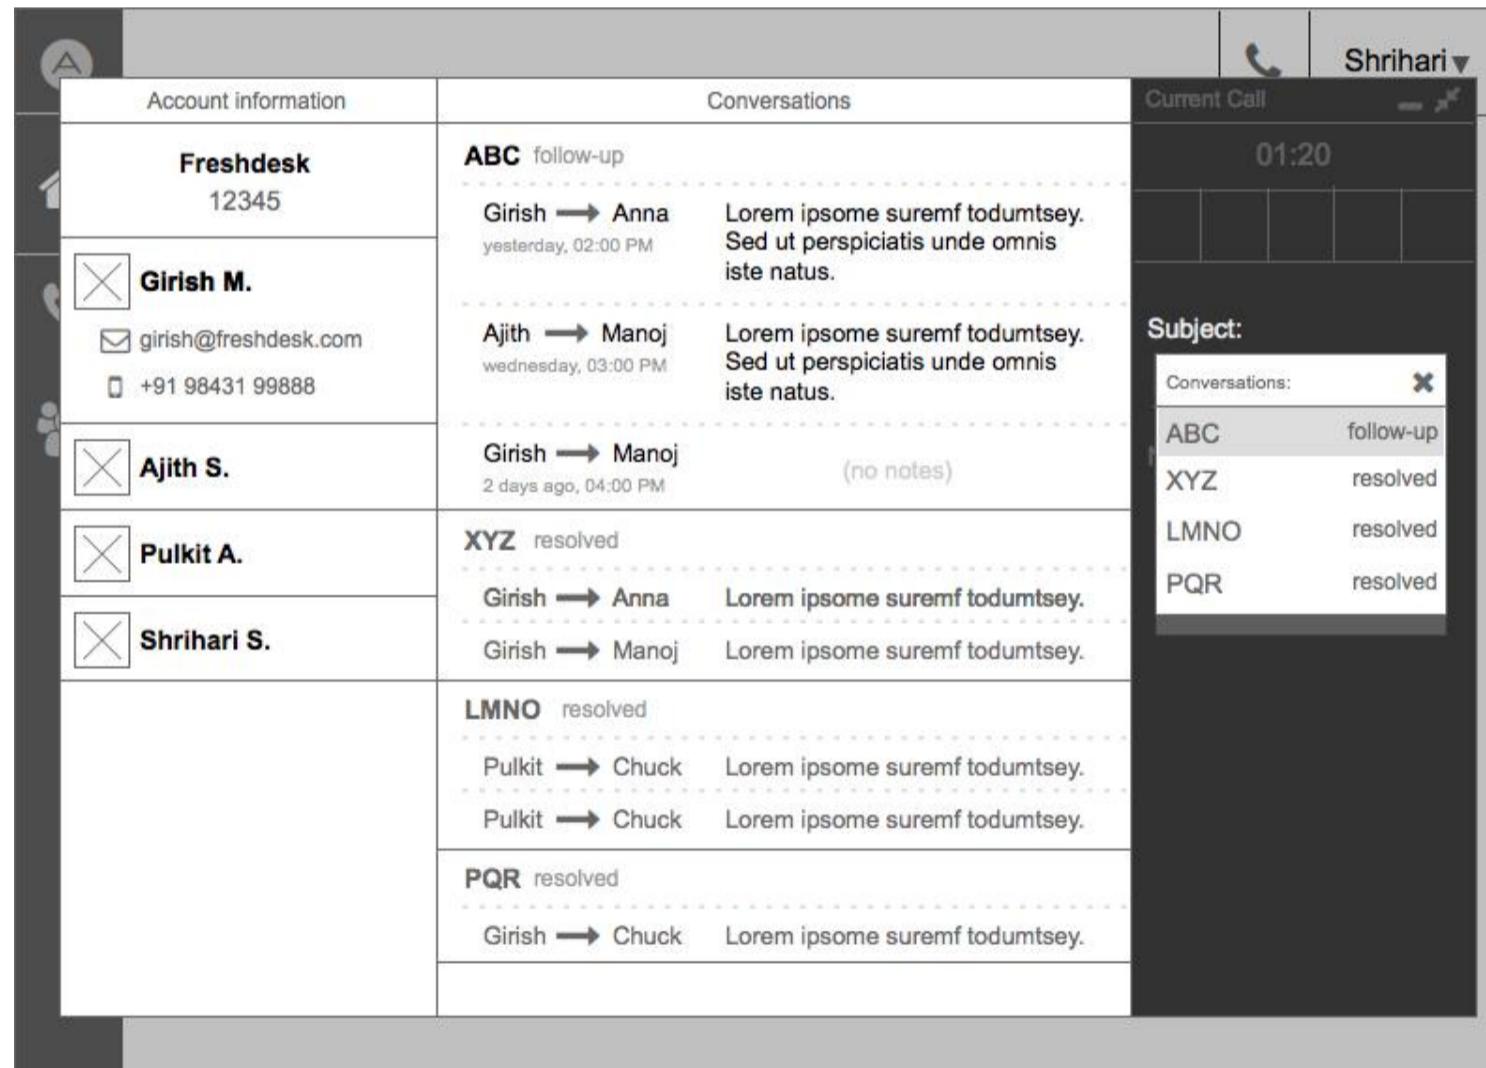

I worked closely with the product manager to understand the user and business requirements and translate them into design directions.

I conducted user interviews with existing customers of Freshdesk to understand their phone requirements, current workflows for calls, and their needs & wants from a new system.

With the results from this stage, I was able to define the information architecture for the product and proceeded to sketch different design solutions.

Wireframes

I explored different design solutions in the form of wireframes. This allowed me to quickly explore different design directions. I iterated over the wireframes continuously to refine them for prototyping and testing with potential users.

Wireframes

The wireframes illustrate the design process for a communication application, likely a call center or customer service tool. The designs include:

- Shrihari Dashboard:** Shows a list of agents (Juan T., Roger F., Steve Austin, etc.) with their status (Available) and recent conversations.
- Call Log:** A detailed view of a call log entry for Juan T., showing the duration (01:23), time (01:23), and notes.
- Search Calls:** A search interface for calls, displaying results for Customer, Agent, and Notes.
- Solar City Profile:** A detailed profile for Solar City, including company name, URL, account ID, plan, location, and other contacts.
- Refund Dashboard:** A dashboard for refunds, showing counts for In Queue (1), In Conversation (2), and Wait Time.
- Customer Profile:** A detailed profile for James Seymour, including contact information, account details (Solar City, 12345, Estate), and other contacts.
- Conversation Log:** A detailed view of a conversation log for Juan T., showing multiple messages and notes.
- Companies View:** A list of companies, with Solar City selected, showing its details and associated contacts.
- Notes View:** A view of notes for a specific contact, showing a large text area for notes and a toolbar below.

Prototyping & Testing

I created prototypes using Invision to cover the various workflows and user scenarios. We tested these prototypes with internal (employees) and external (customers) users. Insights and feedback from these user testing sessions helped me iterate and refine my wireframes.

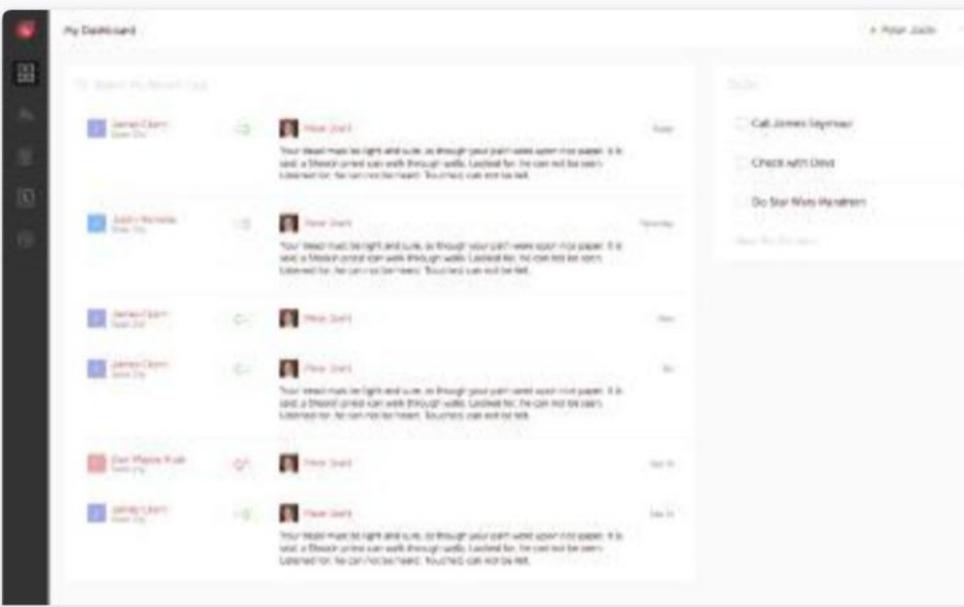

The image displays three wireframe prototypes for the Freshfone application, each showing a different view of the platform's interface:

- Freshfone Unknown Number (JUL 27, 2015):** This prototype shows a search bar at the top with placeholder text "Search for existing contact or company". Below it is a "Create New" button. A large central area is labeled "Note" with a blacked-out content box.
- Freshfone - Full Demo (MAY 12, 2015):** This prototype shows a navigation sidebar on the left with icons for Home, Calls, and Contacts. The main area displays a list of companies with columns for Company Name, Conversations, Contacts, and Last contacted at. Examples include Amazon, Axis Bank, Aura, Banshee, Bagel, Bala, and Bala.
- Freshfone Calling 2 (MAY 6, 2015):** This prototype shows a navigation sidebar on the left. The main area is divided into three sections: "Missed Calls (3)" listing Girish, Bharath, and Steve Jobs; "In Queue (2)" listing Bharath and Jeff Bezos; and a "To-Do List" section with items like "Follow-up with dev" and "Call Dave Jones".

The image displays three wireframe prototypes for the Freshfone application, each showing a different view of the platform's interface:

- Freshfone Calling (APR 27, 2015):** This prototype shows a navigation sidebar on the left. The main area displays three cards: "Missed Calls (3)" with entries for Girish, Bharath, and Steve Jobs; "In Queue (2)" with entries for Bharath and Jeff Bezos; and a "To-Do List" card with items like "Follow-up with dev" and "Call Dave Jones".
- Early Wireframes (APR 1, 2015):** This prototype shows a navigation sidebar on the left. The main area displays a "Contacts" table with columns for Name, Company, Email address, and Phone. It lists contacts like Girish, Steve Jobs, Jeff B., and Bill Gates.
- Freshfone - Agent Call (APR 1, 2015):** This prototype shows a navigation sidebar on the left. The main area is divided into several sections: "Summary" (In-Progress: 0, In-Queue: 0, Missed Calls: 0, SLA: 96%, Revenue: \$140), "In-Queue (0)", "Missed Calls (0)", "Agents" (listing agents with status indicators), and "Incoming Call" (listing agents available for incoming calls).

Freshcaller Widget

I designed an embeddable Freshcaller widget, which is a mini version of the product itself. This widget would be integrated into other Freshworks products and also external products.

The design of the widget could be customised to match the product it is being integrated into.

Side project

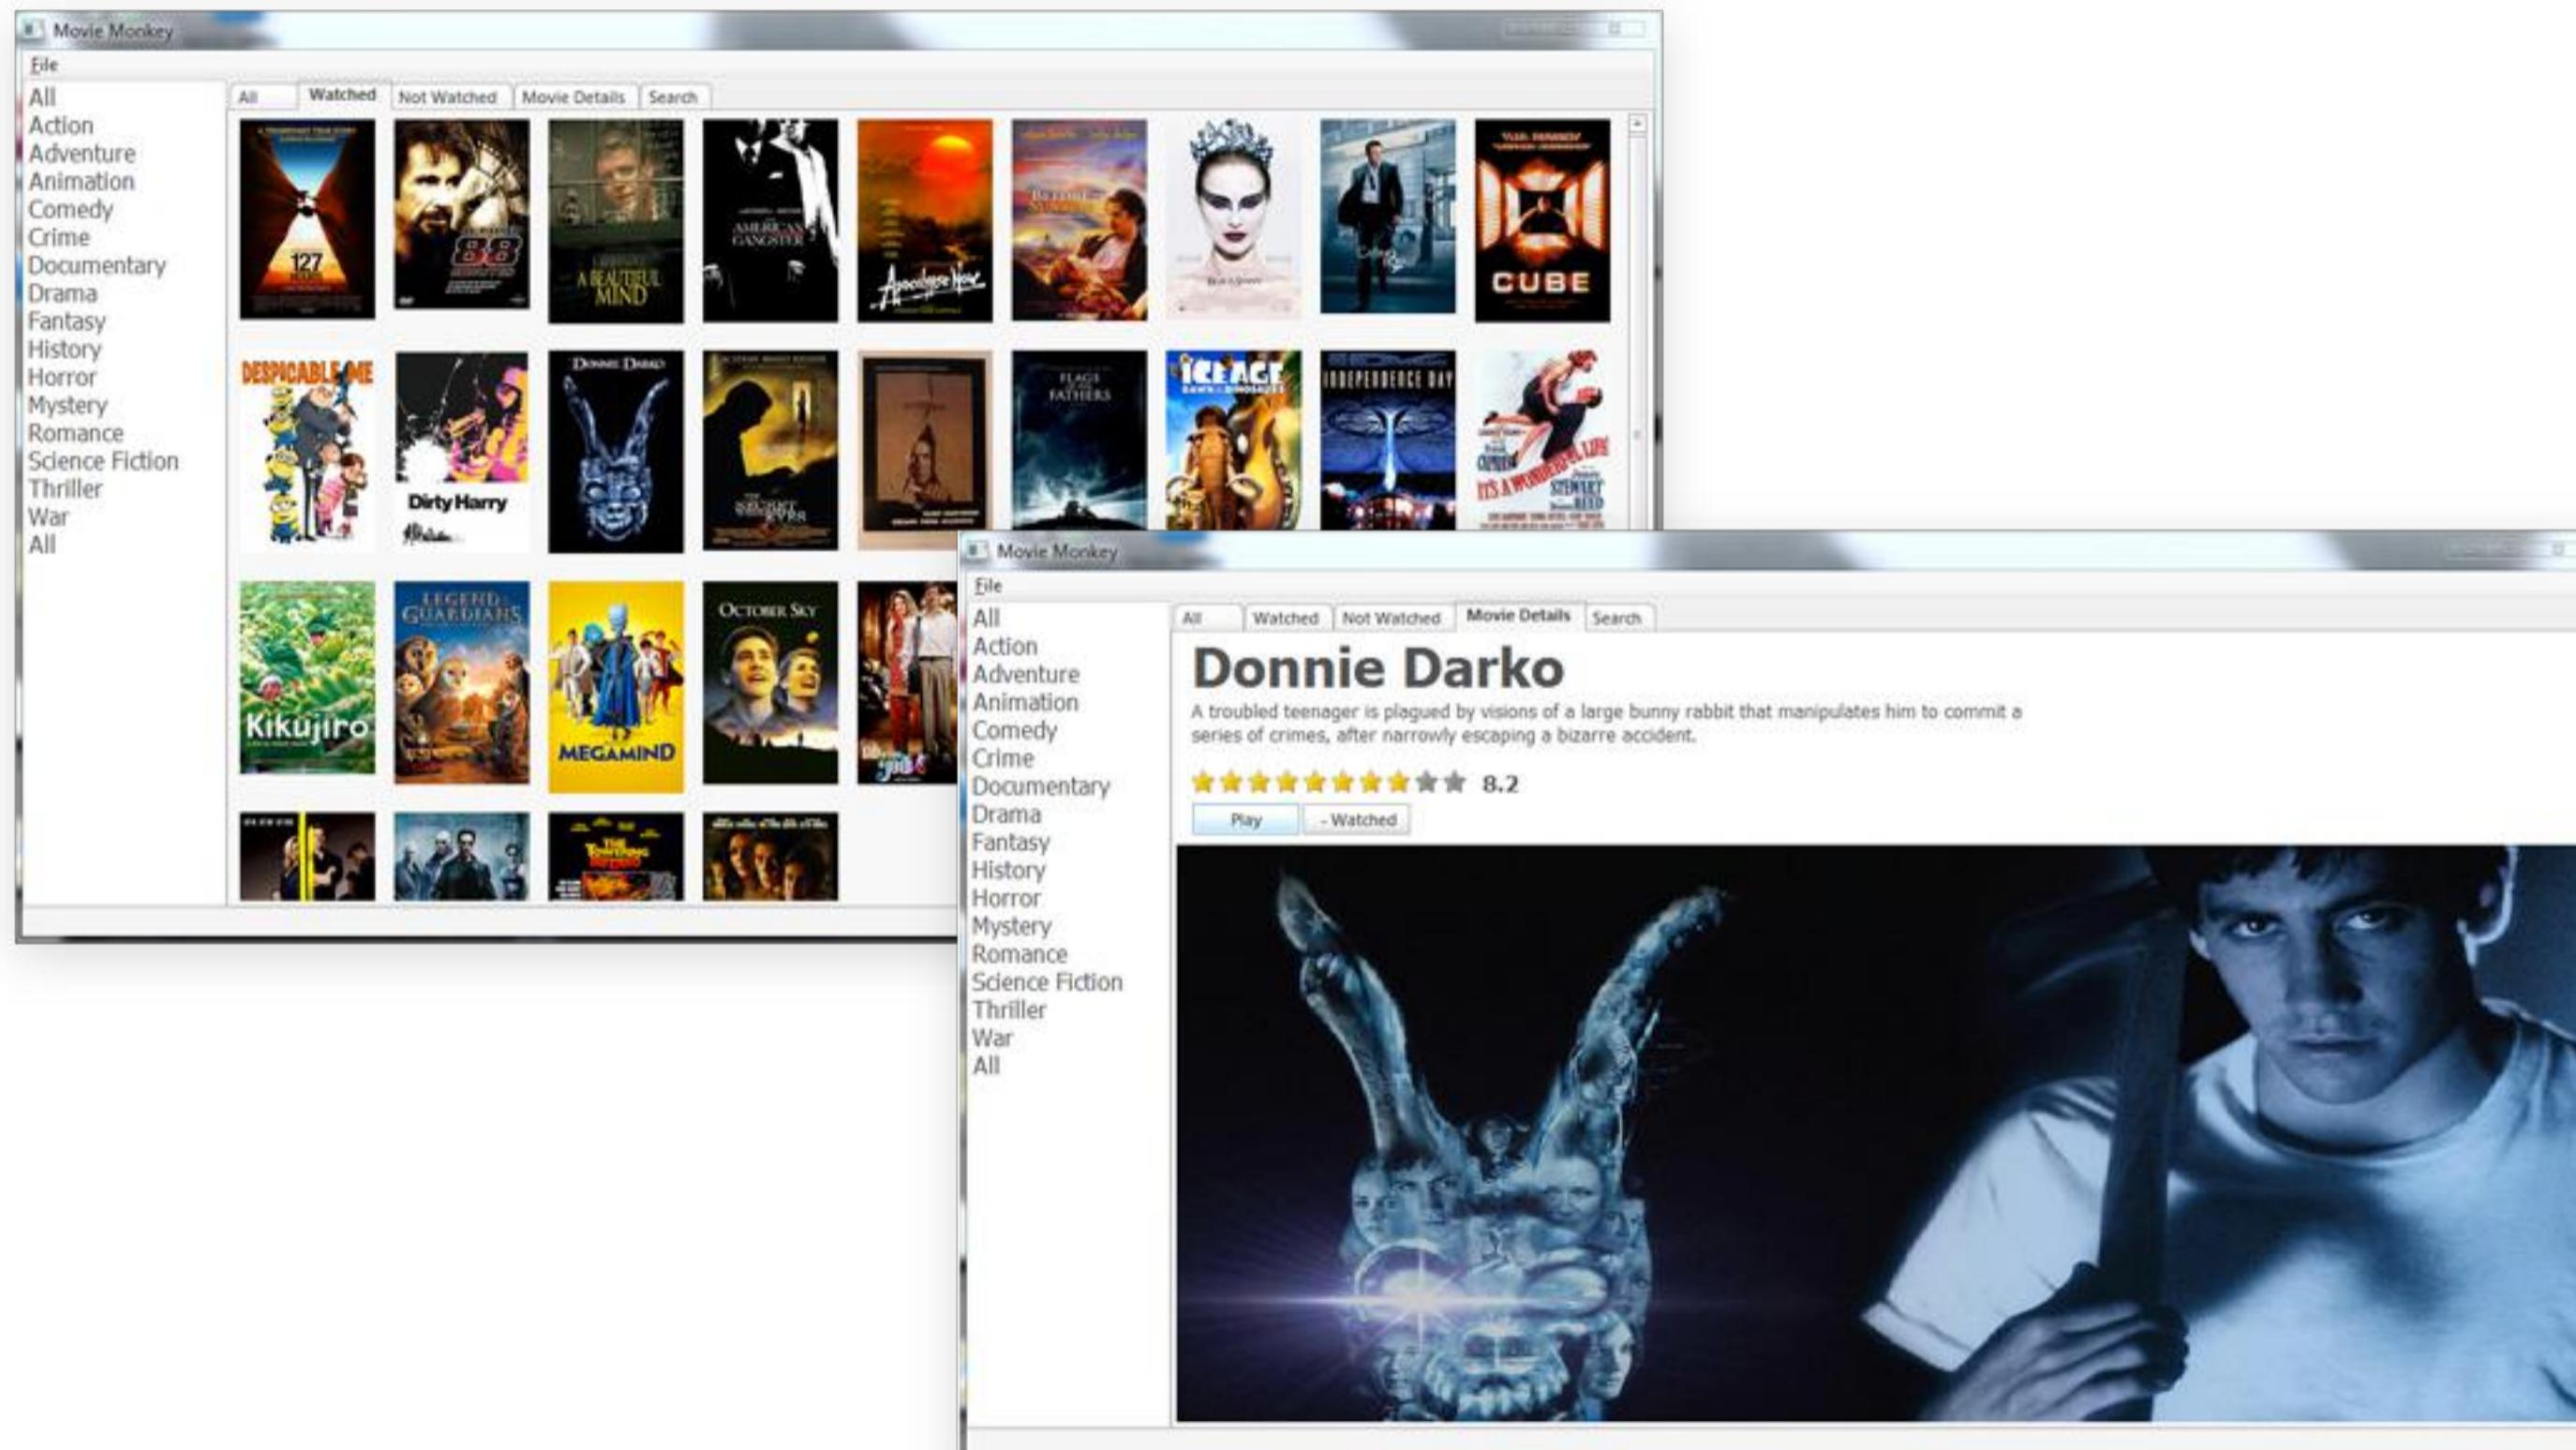

Movie Monkey

Movie Monkey

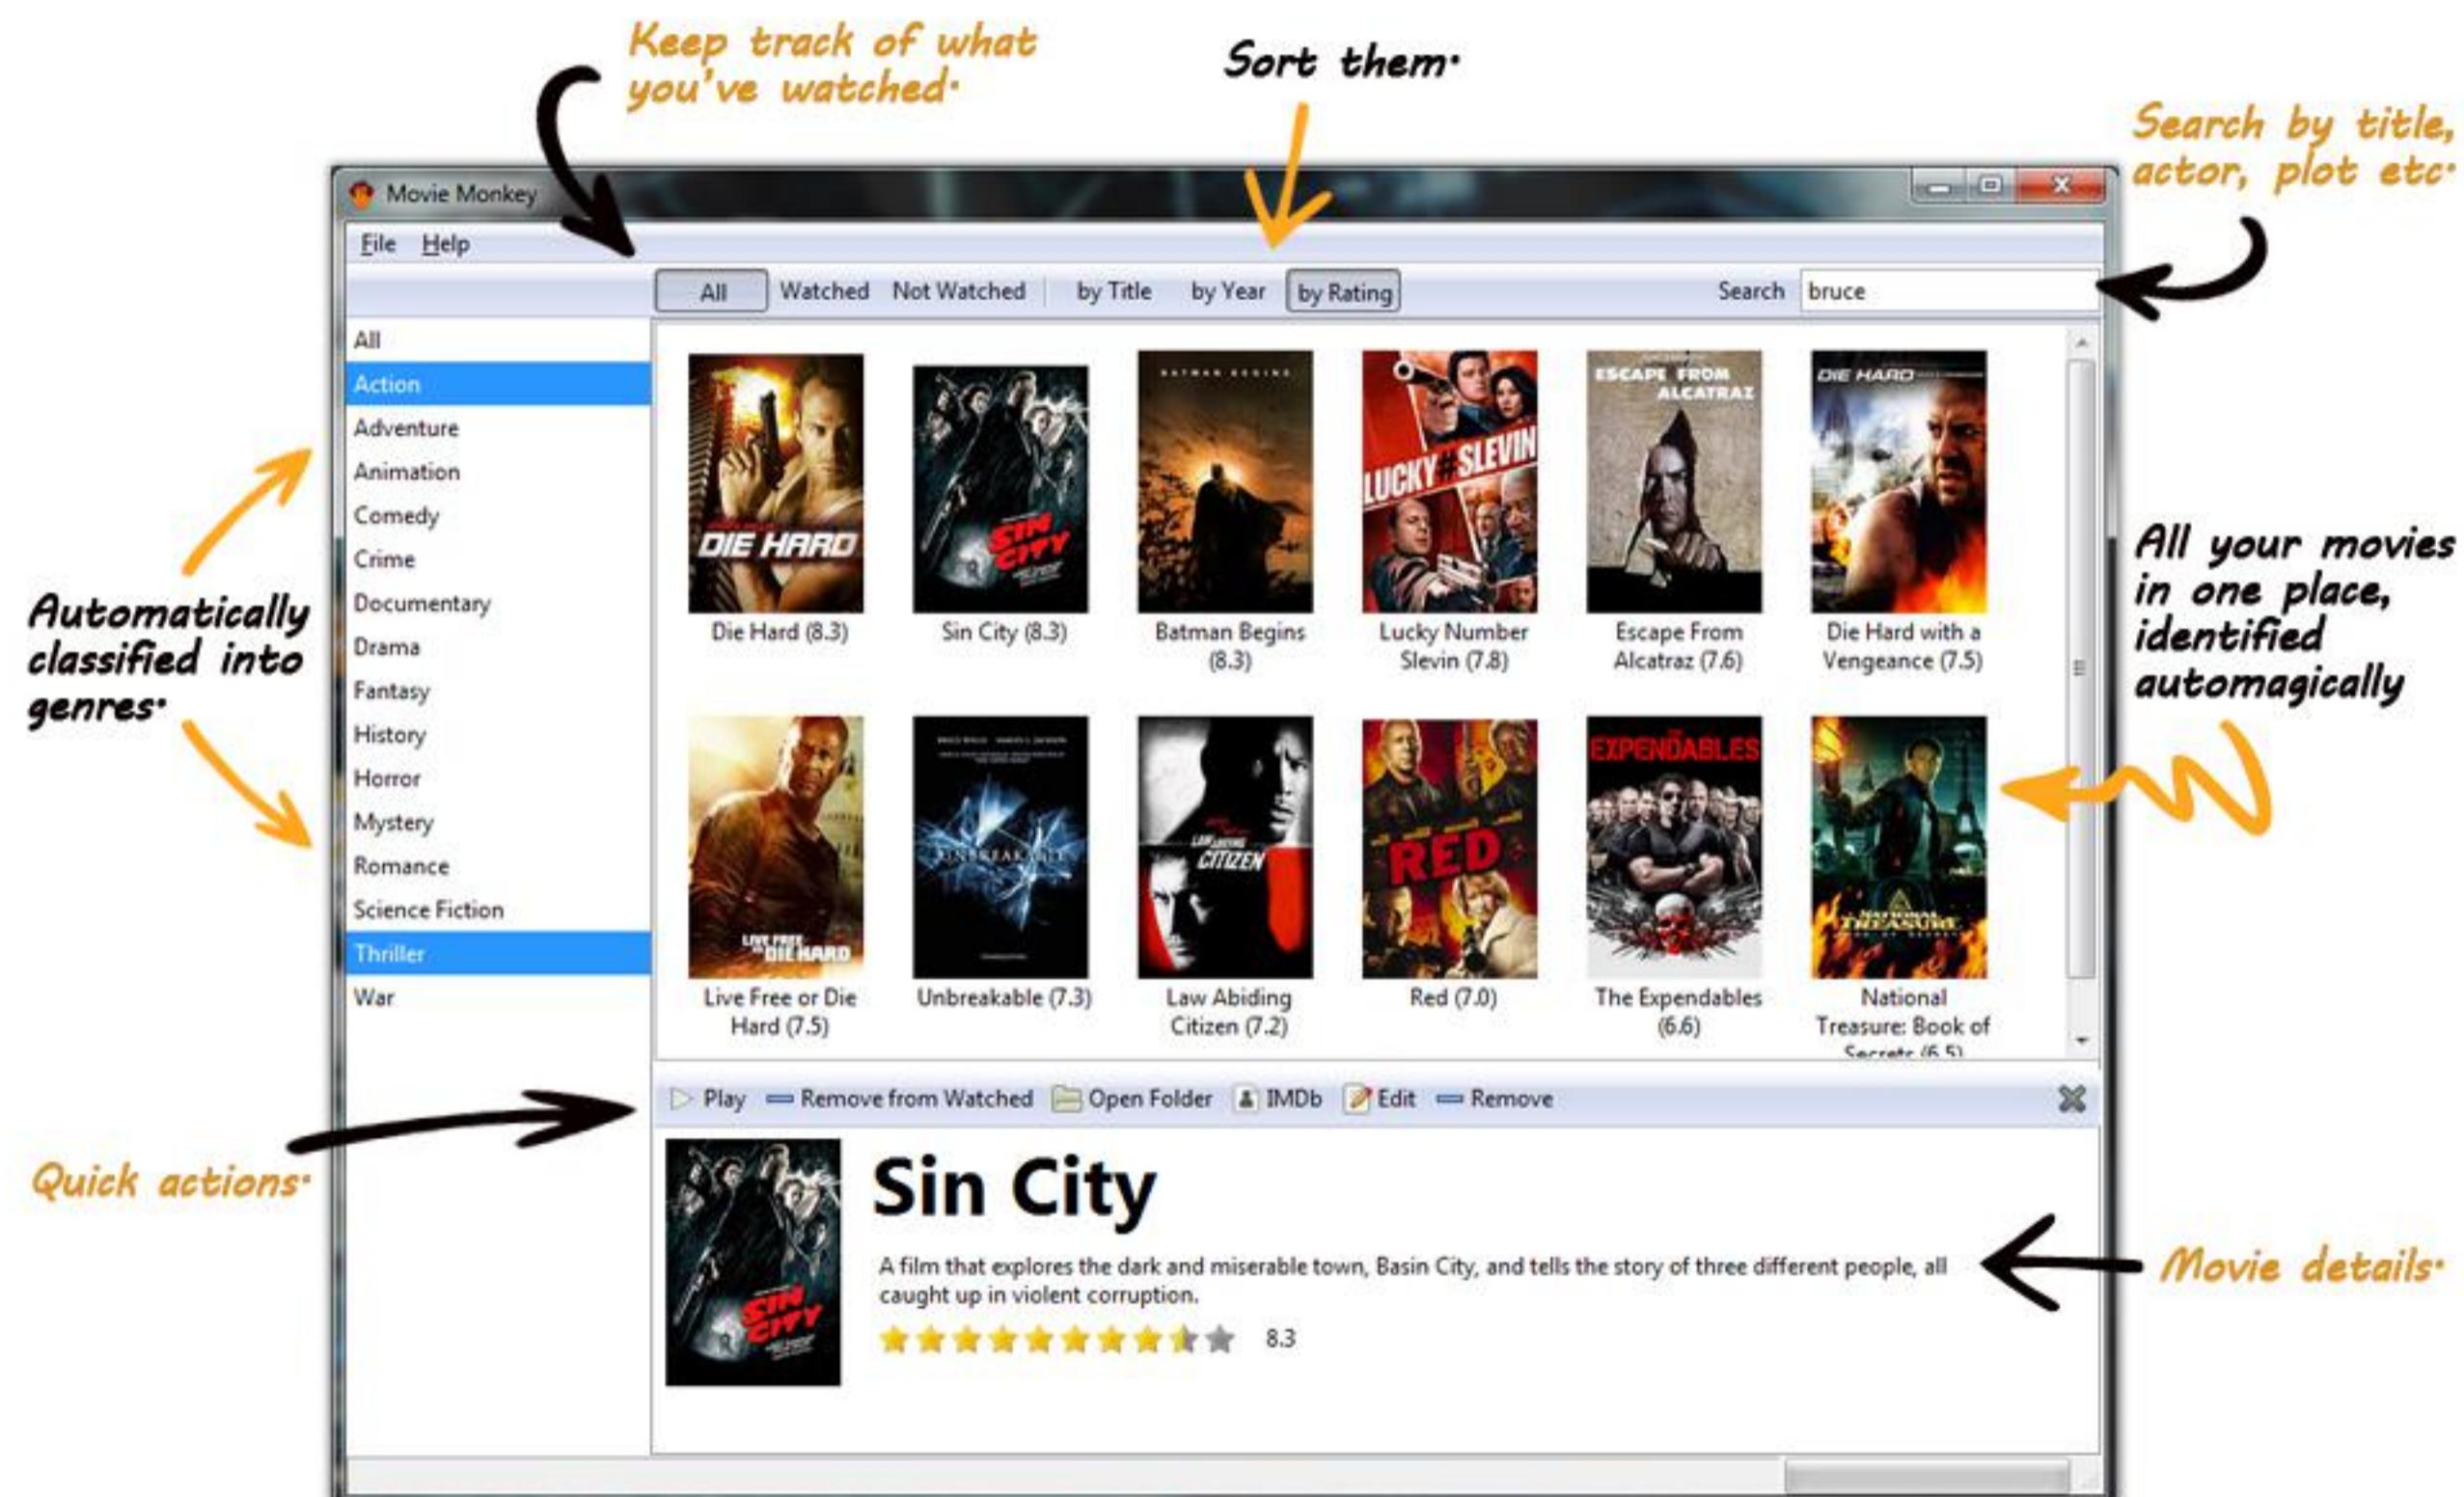

A simple movie organizer app for the desktop. A user can drag and drop movie files and folders from their computer, and the application automatically identifies the movies, downloads details and catalogs the movie.

I developed the first version of the app in Python, when I was at university. In 2017, I redesigned and rewrote it from scratch as an Electron app using HTML, CSS and Javascript. The app is available for download at <http://getmoviemonkey.com/>. The source code is available on GitHub.

In the first version of the app, the design was limited by my ability to implement them in code.

The design evolved, when I moved over to a better GUI framework.

The latest redesign of Movie Monkey focuses on a clean and rich user experience.

The image displays the Movie Monkey application's user interface, highlighting its clean design and integrated features.

Top Section: The title "Movie Monkey" is centered above the subtitle "simple, free movie manager". To the left is a yellow circular icon featuring a cartoon monkey face. To the right is a black "Download" button with a white Apple logo and the word "Download".

Left Side (Movie Detail Screen): A large movie poster for "ARRIVAL" (2016) is shown. The poster features a woman looking up at a massive alien structure. Overlaid on the poster are the movie's title "ARRIVAL" and year "(2016)", a rating of ★ 8, and genre tags: Drama, Mystery, Sci-Fi. Below the poster is a plot summary: "When twelve mysterious spacecraft appear around the world, linguistics professor Louise Banks is tasked with interpreting the language of the apparent alien visitors." At the bottom, it lists actors "Amy Adams, Jeremy Renner, Forest Whitaker, Michael Stuhlbarg" and director "DIRECTED BY Denis Villeneuve".

Right Side (Search Results Screen): This section shows a search bar with the placeholder "Search by title, actors, directors, plot etc..". To the left is a sidebar with movie categories: All, Action, Adventure, Animation, Biography, Comedy, Crime, Documentary, Drama, Family, Fantasy, Music, Mystery, Romance, Sci-Fi, Sport, Thriller, and Western. The main area displays a grid of movie cards, each with a thumbnail, title, and rating. Some visible titles include "ARRIVAL" (2016), "AWAKE: The L...", "CAPTAIN PHILLI...", "Chinatown", "easyA", "Hachi: A Dog's Tale", "HELL OR HIGH WATER", "Let It Be", "More", "Neighbors 2:... ENEMY", and "SNOWPIERCER".

Kontactr

About the project

Kontactr is an online contact form building service. I built it in 2007 single-handedly working on both design and development. I built it using HTML, CSS, Javascript and PHP. Over the course of several years, I continued to respond to customer queries, feature requests and added several new features over time.

I grew the product to over 150,000 users. At its peak, the product was processing over 100,000 form submissions every day.

I sold the product and the company in 2013 as I couldn't find time to work on it anymore.

Website: <http://kontactr.com>

Online Form Builder

Beauty & Simplicity.

Create online forms. No coding.
Embed anywhere. Get emails. Collect data.
